**ES EXECUTIVE SUMMARY**

A three-track cleanup (Track 1, Track 2, and Track 4) was achieved for this Site. The following provides a brief summary of the controls implemented for the Site, as well as the inspections, monitoring, maintenance and reporting activities required by this Site Management Plan (SMP):

**Site Identification No:** C203057 **Site Name and Address:** Former G & C Services, 255 East 138<sup>th</sup> Street, Bronx, New York

<b>Institutional Controls:</b>	1. The property may be used for restricted residential, commercial, and industrial uses.
	2. All Engineering Controls (ECs) must be operated and maintained as specified in this SMP.
	3. The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the New York City Department of Health and Mental Hygiene (NYC DOHMH) to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department.
	4. Groundwater and other environmental or public health monitoring must be performed as defined in this SMP.
	5. Data and information pertinent to site management must be reported at the frequency and in a manner as defined in this SMP.
	6. All future activities that will disturb remaining contaminated material in the Track 2 and 4 areas of the Site must be conducted in accordance with this SMP.
	7. Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed as defined in this SMP.
	8. Access to the Site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Environmental Easement.

**Site Identification No:** C203057 **Site Name and Address:** Former G & C Services, 255 East 138<sup>th</sup> Street, Bronx, New York

<b>Institutional Controls (cont.):</b>	9. Vegetable gardens and farming on the Site are prohibited.
<b>Engineering Controls:</b>	1. Track 4 Remedial Area Composite Cover System
	2. Track 2 and Track 4 Remedial Area Vapor Barrier System in lieu of any future soil vapor evaluation
	3. Monitored Natural Attenuation of Groundwater
<b>Inspections:</b>	<b>Frequency:</b>
1. Track 4 Remedial Area Cover Inspection	Annually
<b>Monitoring:</b>	
1. Post-Remediation Off-Site and On-Site Groundwater Monitoring and Sampling	Quarterly for at least two (2) years
<b>Reporting:</b>	
1. Post-Remediation Off-Site and On-Site Groundwater Monitoring Report	Quarterly for at least two (2) years
2. Periodic Review Report	Annually, or as otherwise determined by the Department

Further descriptions of the above requirements are provided in detail in the latter sections of this Site Management Plan.

## **1.0 INTRODUCTION**

### **1.1 General**

This Site Management Plan (SMP) is a required element of the remedial program for the Former G & C Services Site located at 255 East 138th Street in Bronx, New York (hereinafter referred to as the “Site”). See **Figure 1** – Site Location Map. The Site is currently in the New York State (NYS) Brownfield Cleanup Program (BCP), Site No. C203057, which is administered by New York State Department of Environmental Conservation (NYSDEC).

East 138<sup>th</sup> Street LLC entered into a Brownfield Cleanup Agreement (BCA) on May 19, 2011 with the NYSDEC to remediate the Site. A figure showing the Site location and boundaries of this Site is provided in **Figure 2**. The boundaries of the Site are more fully described in the metes and bounds Site description that is part of the Environmental Easement provided in **Appendix I**.

After completion of the remedial work, some soil contamination was left at this Site in the Track 2 and Track 4 Areas, and some residual groundwater and soil vapor contamination may still be present, which is hereafter referred to as on-Site “remaining contamination”. Contaminated off-Site soil vapor is also encroaching onto the Site from an unknown off-Site source of chlorinated-related compounds. Institutional and Engineering Controls (ICs and ECs) have been incorporated into the Site remedy to control exposure to remaining contamination to ensure protection of public health and the environment. An Environmental Easement granted to the NYSDEC, and recorded with the Bronx County Clerk, requires compliance with this SMP and all ECs and ICs placed on the Site.

This SMP was prepared to manage remaining contamination at the Site until the Environmental Easement is extinguished in accordance with ECL Article 71, Title 36. This plan has been approved by the NYSDEC, and compliance with this plan is required by the grantor of the Environmental Easement and the grantor’s successors and assigns. This SMP may only be revised with the approval of the NYSDEC.

It is important to note that:

- This SMP details the Site-specific implementation procedures that are required by the Environmental Easement. Failure to properly implement the SMP is a violation of the Environmental Easement, which is grounds for revocation of the Certificate of Completion (COC);
- Failure to comply with this SMP is also a violation of Environmental Conservation Law, 6NYCRR Part 375 and the BCA Index #C203057-05-11; Site #C203057 for the Site, and thereby subject to applicable penalties.

All reports associated with the Site can be viewed by contacting the NYSDEC or its successor agency managing environmental issues in New York State. A list of contacts for persons involved with the Site is provided in **Appendix II** of this SMP.

This SMP was prepared by Ira N. Pierce, P.E. on behalf of East 138<sup>th</sup> Street LLC., in accordance with the requirements of the NYSDEC's DER-10 ("Technical Guidance for Site Investigation and Remediation"), dated May 2010, and the guidelines provided by the NYSDEC. This SMP addresses the means for implementing the ICs and/or ECs that are required by the Environmental Easement for the Site.

## **1.2 Revisions**

Revisions to this plan will be proposed in writing to the NYSDEC's project manager. Revisions will be necessary upon, but not limited to, the following occurring: a change in media monitoring requirements, upgrades to or shut-down of a remedial system, post-remedial removal of contaminated sediment or soil, or other significant change to the Site conditions. In accordance with the Environmental Easement for the Site, the NYSDEC will provide a notice of any approved changes to the SMP, and append these notices to the SMP that is retained in its files.

## **1.3 Notifications**

Notifications will be submitted by the property owner to the NYSDEC, as needed, in accordance with NYSDEC's DER - 10 for the following reasons:

- 60-day advance notice of any proposed changes in Site use that are required under the terms of the BCA, 6NYCRR Part 375 and/or Environmental Conservation Law.
- 7-day advance notice of any field activity associated with the remedial program.
- 15-day advance notice of any proposed ground-intrusive activity pursuant to the Excavation Work Plan.
- Notice within 48-hours of any damage or defect to the foundation, structures or EC that reduces or has the potential to reduce the effectiveness of an EC, and likewise, any action to be taken to mitigate the damage or defect.
- Verbal notice by noon of the following day of any emergency, such as a fire; flood; or earthquake that reduces or has the potential to reduce the effectiveness of ECs in place at the Site, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.

Follow-up status reports on actions taken to respond to any emergency event requiring ongoing responsive action submitted to the NYSDEC within 45 days describing and documenting actions taken to restore the effectiveness of the ECs.

Any change in the ownership of the Site or the responsibility for implementing this SMP will include the following notifications:

- At least 60 days prior to the change, the NYSDEC will be notified in writing of the proposed change. This will include a certification that the prospective purchaser/Remedial Party has been provided with a copy of the BCA and all approved work plans and reports, including this SMP.
- Within 15 days after the transfer of all or part of the Site, the new owner's name, contact representative, and contact information will be confirmed in writing to the NYSDEC.

The table below includes contact information for the above notification. The information on this table will be updated as necessary to provide accurate contact information. A full listing of Site-related contact information is provided in **Appendix II**.

**Notifications\* Table**

<b>Name</b>	<b>Contact Information</b>

\* Note: Notifications are subject to change and will be updated as necessary.

## **2.0 SUMMARY OF PREVIOUS INVESTIGATIONS AND REMEDIAL ACTIONS**

### **2.1 Site Location and Description**

The Site is located at 255 East 138<sup>th</sup> Street in Bronx, Bronx County, New York and is identified as Bronx Block 2333 Lot 1 on the New York City Tax Map (see **Figure 1** – Site Location Map). The Site is an approximately 0.46-acre area and is bounded by commercial buildings to the north, East 138th Street and commercial storefronts with residential apartments above to the south, Morris Avenue and a senior residential building to the east, and commercial properties to the west. The Site boundary is provided on **Figure 2** – Tax Map. The boundaries of the Site are more fully described in **Appendix I –Environmental Easement**. The owners of the Site parcels at the time of issuance of this SMP is East 138<sup>th</sup> Street LLC.

### **2.2 Physical Setting**

#### **2.2.1 Land Use**

The Site is currently being developed as an eight-story mixed residential/commercial use building. The redevelopment will not be completed for quite some time after the SMP is approved. The Site is zoned M1-4/R7X (manufacturing/residential) and the redevelopment of the Site is consistent with the zoning designation. The eight-story building will consist of 100% affordable or low income rental apartments. The South Bronx Overall Economic Development Corporation (“SoBRO”) has received a Brownfield Opportunity Area (“BOA”) grant for this area of the South Bronx, and has designated the area as the Harlem River BOA area.

The properties adjoining the Site and in the neighborhood surrounding the Site primarily include commercial and residential properties. East 138<sup>th</sup> Street and mixed commercial and residential uses properties are located to the south of the Site; commercial properties are located to the north of the Site; Morris Avenue and a senior-living residential building are located to the east of the Site; and commercial properties identified as “Quick Printer” and a “Deli” are located to the west of the Site..

### 2.2.2 Geology

Geologic conditions at the Site were identified during several previous environmental investigations. According to the Remedial Investigation Report (RIR), prepared by Brinkerhoff in May 2013, a layer of urban historic fill, which consists of various amounts of gravel, brick, concrete, sand, etc. was identified at the Site. The urban historic fill layer was Site-wide and extended to approximately nine (9) feet below grade surface (bgs), with a distribution that appeared to be random horizontally and vertically. All of this contaminated historic fill was removed and disposed of off-Site with the exception of the Track 4 Area where some, but not all, of the urban historic fill was removed.

A gray medium to fine sand was identified between approximately nine (9) feet bgs to an average depth of 14 feet bgs. This layer was also removed in the Track 1 and 2 Areas, but not entirely in the Track 4 Area.

Below 14 feet bgs, sediments consist of interbedded gray and brown silt with some fine sand present to 25 feet bgs, the maximum depth of the environmental borings. Bedrock was not encountered during the previous environmental investigations; however, based on a Subsurface Exploration and Foundation Engineering Report, performed by GZA GeoEnvironmental of New York and dated March 9, 2011, bedrock was encountered between approximately 65 and 85 feet below grade surface across the Site. Geological cross sections are shown on **Figures 3** through **5**. Site-specific boring logs are provided in **Appendix III**.

### 2.2.3 Hydrogeology

Depth to groundwater varies across the Site between approximately 4.75 and 6.5 feet below grade surface, according to the RIR prepared by Brinkerhoff in May 2013. The inferred groundwater direction is towards the west to southwest. A groundwater contour map is shown in **Figure 6**. The groundwater elevations are in feet above mean sea level. Monitoring well construction logs are provided in **Appendix III**.

## **2.3 Redevelopment Plan**

The Remedial Action was performed to make the Site protective of human health and the environment consistent with the contemplated residential and commercial end use. The redevelopment of the Site includes the construction of an eight-story building that will be utilized for commercial and residential use. The first floor will consist of commercial retail space and the remaining floors, two (2) through eight (8), will consist of residential apartments. In the basement, a ventilated below-grade parking area, using high volume air-exchange in accordance with the NYC mechanical code, will be constructed throughout the entire building footprint that was excavated to 15 feet bgs. The small strip of land along the northern boundary and the northeast corner of the Site and the parking ramp in the western portion of the Site, consist of the Track 4 area of the Site and are not included in the building basement parking area. Additionally, once constructed, the basement will consist of a fire pump room, an electrical room, bicycle storage, tenant storage, staff toilet/lockers, maintenance storage, and retail storage. The first floor will be developed with a nurse's office, an exam room, a mechanical closet, bathrooms, a kitchen, a conference room, a reception room, a program director's room, a common space, multiple retail spaces, two (2) elevators, and a loading dock. The second through eighth floors consist of residential apartments ranging from studios to three (3) bedrooms.

## **2.4 Investigation and Remedial History**

The following provides a remedial history timeline and a brief summary of the available project records to document key investigative and remedial milestones for the Site. Full titles for each of the reports referenced below are provided in Section 8.0 - References.

### **2.4.1 Past Uses and Ownership**

The 0.4678 acre Site historically consisted of two (2) adjacent parcels in the South Bronx, both of which were former gas stations during their history (2551 3rd Avenue Block 2333/Lot 1) and Third Avenue/138th Street LLC (245 East 138th Street Block 2333/Lot 6). Lot 6 was a gas station and later a gas station and auto repair shop for more

than 80 years. Lot 1 was a gas station for approximately 34 years. Before the gas station operations, between 1891 and 1935, these sites operated as one (1) site. A stone yard and a machine shop were present. These early heavy industrial, and subsequent petroleum related uses caused predominantly petroleum related contamination on the Site.

#### 2.4.2 Historical Reports

##### **Underground Storage Tank (UST) Closure Report, The Tyree Organization, Ltd. (Tyree), October 1998**

According to this UST Closure Report, Tyree was retained by Getty Properties Corporation (Getty) in 1998 to remove four (4) 550-gallon gasoline USTs, one (1) 4,000-gallon gasoline UST, and the associated pump island in the western portion of former Block 2333, Lot 6 (245 East 138<sup>th</sup> Street). On July 1, 1998, the pump island and piping were removed, and contaminated soil was identified. An area of contaminated soil was removed via excavation and off-Site disposal. A spill was reported to NYSDEC and Spill Case No. 98-04000 was assigned. Post-excavation soil samples were collected from each sidewall and the base of the excavation. The excavation was backfilled to grade with stone. On July 8, 1998, the 550-gallon USTs were removed from the Site. No holes were observed in the tanks and groundwater was not encountered. Post-excavation soil samples were collected and the excavation was backfilled with stone. The 4,000-gallon UST was removed on July 10, 1998. No holes were identified in the tank and groundwater was not encountered. Post-excavation soil samples were collected from the east and west sidewalls, and the excavation was backfilled with stone. Several compounds were detected in soil samples at concentrations exceeding applicable standards at the time in the dispenser excavation and the 550-gallon UST excavation.

##### **Phase I ESA, Middleton Environmental, Inc. (Middleton), October 1, 2001**

According to the Phase I ESA prepared by Middleton, the former Block 2333, Lot 6 (245 East 138<sup>th</sup> Street) was developed with a garage building in 1952 and was formerly operated as a Getty gas station. Middleton reviewed the above-referenced Tyree UST Closure Report and determined that the spill number had not been closed and an appropriate number of post-excavation soil samples had not been collected. According to

the NYSDEC-PBS database, a second 4,000-gallon gasoline UST, a 240-gallon fuel oil UST, and a 240-gallon waste oil UST were installed in 1998; however, Getty personnel stated that the tanks were not installed and Middleton did not observe evidence of the tanks on-Site. Middleton observed two (2) monitoring wells on the Site, but groundwater data were not provided by Tyree. Based upon the information provided in the Phase I ESA, Middleton recommended additional investigation of the former tank excavations.

**Phase II Site Investigation (SI), P.W. Grosser (PWG), December 4, 2001**

PWG was contracted to conduct a Phase II SI on former Block 2333, Lot 6 (245 East 138<sup>th</sup> Street) in response to the above-referenced Middleton Phase I ESA. Since Tyree did not collect soil samples from the base of the UST excavations or from the south sidewall of the 4,000-gallon UST excavation, PWG installed soil borings in these locations to collect soil samples. One (1) soil sample was collected from each boring. PWG also collected groundwater samples from temporary well points installed within each boring. The soil and groundwater samples were analyzed for Volatile Organic Compounds (VOCs) via EPA Method 8021 (STARS List). The soil samples were compared to the NYSDEC's Residential Soil Cleanup Objectives (SCOs). Laboratory analytical results indicated that several VOCs were detected in each sample at concentrations exceeding the applicable Residential SCOs. Groundwater analytical results were compared to the NYSDEC's Class GA Groundwater Quality Standards (GQS). Laboratory analytical results indicated that VOCs were detected in the samples collected at concentrations exceeding the applicable standards. PWG also collected groundwater samples from the two (2) monitoring wells on the subject property. Laboratory analytical results indicated that VOCs were detected in the samples collected at concentrations less than the applicable standards.

The Phase II SI concluded that significant soil contamination remained on-Site in the vicinity of the former USTs and former dispenser island, serving as a source of VOCs to the groundwater. PWG recommended vertical and horizontal delineation of the soil and installation of additional monitoring wells to calculate groundwater flow direction and to fully delineate groundwater contamination.

**Proposed Remedial Action Plan (RAP), PWG, March 14, 2002**

Based upon the information obtained from the Phase II SI, PWG proposed a RAP for the former Block 2333, Lot 6 (245 East 138<sup>th</sup> Street) which consisted of excavating soil from the former pump island location and the former UST locations and delineating the extent of the contamination during excavation via field screening. Post-excavation soil samples were proposed followed by the application of Oxygen Release Compound (ORC<sup>®</sup>) directly into the excavation. The excavation would then be backfilled. PWG also proposed the installation of two additional monitoring wells and sampling of all the wells on-Site. No other information was provided regarding when the remedial action was completed or the effectiveness of the remedial action. Quarterly groundwater monitoring was performed from August 2004 through May 2006.

**No Further Investigation Letter, NYSDEC, November 3, 2006**

NYSDEC closed Spill No. 98-04000 and requested that the wells associated with the investigation be decommissioned. The letter stated that the approval did not include off-Site contamination migration or environmental conditions unknown at the time of approval.

**Phase I ESA, AKRF, Inc. (AKRF), February 2007**

According to the Phase I ESA, former Block 2333, Lot 1 (2551 3<sup>rd</sup> Avenue) was developed with one (1) building that operated as a KFC fast food restaurant from the 1960s until December 2006. The Site contained a suspected storm-water detention vault and a suspected grease trap related to the restaurant. The Phase I ESA indicated that, while no evidence of USTs was observed during the Site inspection, the 1935 and 1946 Sanborn<sup>®</sup> Fire Insurance Maps (Sanborns) showed that a gasoline station containing 10 550-gallon gasoline USTs were also present on this portion of the Site. No information was provided during report preparation indicating that the tanks had been removed or properly closed. The Phase I ESA concluded that soil and groundwater may have been affected by historic on-Site and off-Site uses, as well as urban fill and the potential USTs. AKRF recommended a Phase II SI.

**Tank and Spill Closure Report, LCS Inc. (LCS), August 31, 2007**

According to the Tank and Spill Closure Report, on June 6, 2007, a geophysical investigation was conducted on former Block 2333, Lot 1 (2551 3<sup>rd</sup> Avenue) to evaluate the presence of USTs. The geophysical survey identified one (1) anomalous area indicative of USTs.

On June 29, 2007, 11 550-gallon USTs and associated piping were removed by Brookside Environmental, Inc. Three (3) of the USTs contained waste oil and the remaining eight (8) USTs contained gasoline. Five (5) of the 11 USTs were observed to contain holes on the bottoms and sidewalls. Petroleum-impacted soils were present on the subject property; therefore, Spill Case No. 07-03567 was assigned. Approximately 205 tons of contaminated soil were excavated and disposed. Groundwater was not encountered during the excavation.

Post-excavation soil samples were collected and analyzed by a New York-certified laboratory for VOCs via EPA Method 8260 and 8270 STARS. VOCs were not detected in the soil samples collected; however, several soil samples showed elevated levels of semi-volatile organic compounds (SVOCs). LCS concluded that the elevated levels of SVOCs were related to historic ash fill found on Site.

**No Further Investigation Letter, NYSDEC, May 16, 2008**

NYSDEC closed Spill Case No. 0703567 and stated that no further investigation or response would be required. However, groundwater sampling and analysis were not conducted.

**Phase I ESA, Brinkerhoff, November 2, 2010**

The Phase I ESA was completed for the entire subject property (formerly Block 2333, Lots 1 and 6) and identified the following RECs on the subject property:

*2551 3<sup>rd</sup> Avenue (Formerly Block 2333, Lot 1):*

According to Sanborn<sup>®</sup> Fire Insurance Maps, the subject property was formerly developed as a gasoline service station with 11 550-gallon gasoline USTs. A Tank and Spill Closure Report was prepared for the owner and stated that 11 550-gallon USTs were removed from the subject site. Five (5) of the USTs were discovered to be leaking, and a

NYSDEC Spill Number was assigned. Contaminated soil was removed from beneath the USTs and soil samples were collected. The Tank and Spill Closure Report states that the soil samples did not show elevated levels of VOCs, but SVOCs were detected.

245 East 138<sup>th</sup> Street (Formerly Block 2333, Lot 6):

According to Sanborn<sup>®</sup> Fire Insurance Maps, the subject property was formerly developed with a gasoline service station with four (4) 550-gallon gasoline USTs. According to the Environmental Data Resources, Inc. (EDR) search, the subject property was a former Getty gas station with four (4) 550-gallon USTs and one (1) 4,000-gallon UST. These USTs were removed from the subject property, and a discharge was confirmed after removal. A remedial action was conducted and the NYSDEC issued a Letter of No Further Action (NFA) for the spill. The NYSDEC stated in the NFA that gasoline related compounds remained in the groundwater, but were showing signs of a decreasing trend in their concentrations. During the Site visit, Brinkerhoff observed four (4) vent pipes attached to the subject building.

**Phase II Site Investigation (SI), Brinkerhoff, January 20, 2011**

Brinkerhoff completed a Phase II SI for the entire subject property (formerly Block 2333, Lots 1 and 6), which included a geophysical investigation, soil boring and sample analyses, and a groundwater investigation. The geophysical investigation did not identify anomalies indicative of remaining USTs.

Laboratory analytical results related to the soil investigation reported VOCs below the NYSDEC's Restricted-Residential Use SCOs, but exceeding the CP-51 Soil Cleanup Levels for Gasoline Contaminated Soil. The VOCs benzene, ethylbenzene, xylenes, and isopropylbenzene exceeded the soil cleanup levels; chlorinated VOCs were not detected in the soil samples. The laboratory also reported elevated concentrations of SVOCs, specifically, polynuclear aromatic hydrocarbons (PAHs), and various metals, including lead, chromium, copper, and mercury, at concentrations exceeding the NYSDEC Restricted-Residential Use SCOs.

A groundwater investigation was conducted and the laboratory analytical results indicated that the gasoline-related compounds benzene, toluene, ethylbenzene, xylenes, 1,4,5-trimethylbenzene, and 1,2,4-trimethylbenzene exceeded the applicable GQS.

The presence of the PAHs, metals, and VOCs in the soil and VOCs in the groundwater suggested that contamination related to former petroleum Site operations and contaminated fill were still present at the Site.

### **Remedial Investigation (RI) Report, Brinkerhoff, May 2013**

After entering the BCA, Brinkerhoff completed a RI for the entire subject property (formerly Block 2333, Lots 1 and 6). The following scope of work was performed as part of the RI:

- Advanced 17 soil borings across the Site. Collected 50 soil samples.
- Installed six (6) temporary monitoring well points and four (4) permanent monitoring wells across the Site. Collected 10 groundwater samples.
- Installed eight (8) soil vapor implants across the Site and collected eight (8) soil vapor samples.

The Site contains urban historic fill, which consists of varying amounts of gravel, concrete, brick, and sand, etc. The fill is Site-wide and extends to approximately nine (9) feet below grade surface, and the distribution appears to be random with respect to horizontal distribution and depth. The Site was formerly developed with two (2) gas stations. A total of 16 USTs were present at the Site and were removed prior to 2007. The RI concluded that the historic use of the Site had impacted soil and groundwater, but remedial actions previously completed at the Site have remediated most of the soil contamination related to the former USTs and dispensers. Petroleum-related compounds were detected in groundwater samples. Chlorinated VOCs were detected in vapor samples, even though these compounds were not detected in soil or groundwater beneath the Site. Urban historic fill remains present at the Site. Groundwater was detected at depths ranging from 4.75 feet to 10 feet below grade surface and flows in a west-southwest direction. The groundwater contaminants of concern (COCs) include petroleum-related VOCs, various SVOCs, and metals.

**Remedial Action Work Plan (RAWP), Brinkerhoff, October 2013**

The following is a summary of the proposed remedial action for the entire subject property (formerly Block 2333, Lots 1 and 6):

1. Implementing a Community Air Monitoring Program (CAMP) for particulates and volatile organic carbon compounds during the excavation of material;
2. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations; and excavation and off-Site removal of soil/fill exceeding the Track 1 or Track 2 SCOs ;
3. Site mobilization involving Site security setup, equipment mobilization, utility mark outs, and marking and staking of excavation areas;
4. Demonstrating Achievement of the Track 1 or Track 2 SCOs through end-point sample results;
5. Transportation and off-Site disposal of all soil/fill material excavated during the installation of the material to allow construction of the mechanical room floor and below grade parking garage in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan, and sampling and analysis of excavated media as required by disposal facilities;
6. Installation of a Preprufe 300R waterproofing membrane (which is also a vapor barrier) beneath the structure and along the foundation sidewalls;
7. The ventilation of the below grade parking area is consistent with NYC Building Code.;
8. Submission of a Final Engineering Report (FER) that describes remedial activities, certifies that the remedial requirements have been achieved, describes all ECs and ICs to be implemented at the Site, if any, and lists any changes from this RAWP that may have been required in the field; and,
9. If a Track 2 cleanup is implemented and the Remedial Action Objectives (RAOs) for soil vapor and/or groundwater have not been achieved, submission of an approved SMP and environmental easement for long-term management of residual contamination is required. The SMP would include plans for operation, maintenance, monitoring, inspection and certification of ECs and reporting at a

specified frequency and the easement will include requirements to implement the SMP and any required ICs and ECs at the Site.

**Explanation of Significant Difference Letter, NYSDEC, September 2015**

An Explanation of Significant Difference (ESD) was prepared to inform the public of a change in the remedy for the BCP Site. The original remedy for the Site consisted of a Track 2 Cleanup which involved Site-wide excavation to a depth of 15 feet bgs. However, due to structural constraints with the northern adjacent buildings foundation's, excavation along the northern property boundary could not be performed, and therefore, a cover system must be installed at grade level to prevent exposure to contaminants in this new Track 4 area. Due to the need for a Site cover in this area, a Track 2 remedy could no longer be achieved in this portion of the Site. Instead, a Track 4 Cleanup will be achieved in this portion of the Site. The September 2015 ESD further stated: "A vapor barrier/waterproof membrane will also be installed and the below-grade parking garage will be ventilated in accordance with NYC mechanical code".

**Technical Manual for the Application of the Oxygen Release Compound (ORC), Brinkerhoff, Revised – October 30, 2015**

As part of the selected remedy in the NYSDEC-approved RAWP for the Site located at 255 East 138<sup>th</sup> Street, Bronx, New York, one (1) of the elements is to treat the groundwater at the Site. Groundwater treatment at the Site includes three (3) components: excavation and off-Site removal of source material (non-hazardous petroleum-impacted soils); Site-wide dewatering; and, application of an Oxygen Release Compound (ORC) into the subsurface soils beneath the proposed development foundation. The third component of the groundwater treatment at the Site is the application of ORC. ORC Advanced® Pellets will be applied to the base depth of excavation in the western portion of the Site. The ORC Advanced® Pellets will be thoroughly mixed with the subsurface soils. Following the application of the ORC into the subsurface soils, the foundation slab will be installed and the dewatering system will no longer be needed and will be turned off. Then, the groundwater will be rebound to its natural state (i.e., elevation) and interact with the ORC Advanced® Pellets and begin accelerating the biodegradation process of the potential petroleum-related VOCs and SVOCs that may exist in groundwater following remediation at the Site.

**Chemical Injection Plan for the Newly Proposed Track 4 Ramp Area, Brinkerhoff,  
June 21, 2016**

On December 8, 2015, a Formal Dispute Resolution Notice was filed and a request for a Revised Track 4 Remedy in the area of the proposed ramp along the western boundary of the Site was issued to NYSDEC. Similar to the northern boundary of the Site, extensive soil excavation along the western boundary of the Site cannot occur due to structural constraints with the adjacent building located at 243 East 138th Street. However, petroleum-impacted soil, determined to be “source material” by NYSDEC, was previously identified and NYSDEC required that this “source material” be remediated. As stated in the NYSDEC-approved RAWP soil excavation to 15 feet bgs and application of ORC Advanced® Pellets, manufactured by Regenesys, into the excavation bottom was the original proposed remedy for this portion of the Site, which could not be feasibly achieved. Therefore, treatment, which is the next remedial methodology in the preferred remedial hierarchy of options, was selected and approved by NYSDEC.

The new treatment remedy consists of the following since excavation to 15 feet bgs is no longer possible: (a) the top six (6) feet of soil in this Newly Proposed Track 4 Remedial Area shall be excavated and removed off-Site and (b) a single chemical injection event (ISCO #1) using a mixture of ferrous sulfate and hydrogen peroxide aqueous solutions will be performed as the selected remedy to remediate the petroleum-impacted soil “source material”.

The temporary chemical injections will be performed by Environmental Remediation and Financial Services, LLC (ERFS) and the groundwater will be monitored for oxidant concentrations and other parameters during the injection. Prior to and following the chemical injection event (ISCO #1), groundwater sampling will be performed to determine the effectiveness of the “source material” remediation and the treatment of the Site groundwater. Post-injection groundwater sampling will be completed on a quarterly basis until a decreasing trend is established and no evidence of rebounding effects is achieved. If a reduction of the concentrations of gasoline-related compounds is not achieved or if evidence of rebounding concentrations are observed in the post-injection quarterly monitoring, a second temporary chemical injection event

(ISCO #2) will be performed. As mentioned above, post-injection groundwater sampling will be completed on a quarterly basis until a decreasing trend is established and no evidence of rebounding effects is achieved. If a decreasing trend is not established following the temporary chemical injection event (ISCO #2), permanent injection infrastructures may need to be installed, as required by NYSDEC.

The Chemical Injection Plan was prepared to address and remediate the “source material” that was previously identified during the RI and serves as an explanation of the elements that will be performed to remediate the entire Newly Proposed Track 4 Remedial Area for this Site. Following completion of the “source material” remediation, a composite cover system will be installed overlying the residual soils in the entire Newly Proposed Track 4 Remedial Area.

### **Second Explanation of Significant Difference Letter, NYSDEC, September 2016**

A second Explanation of Significant Difference (ESD) was prepared to inform the public of another change in the remedy to expand the area of the Site achieving a Track 4 Cleanup, instead of a Track 2 Cleanup, due to similar structural constraints relative to excavation along the northern boundary of the Site. The Track 4 Cleanup Area will now include the approximately 20 foot wide portion of land located along the western boundary of the Site. Also, for the southeast corner of the Site, the cleanup goal will now achieve a Track 1 cleanup, since the NYURU SCOs were already achieved in this area.

## **2.5 Remedial Action Objectives (RAOs)**

The RAOs for the Site as listed in the Decision Document, dated October 2013, are as follows:

### **Groundwater**

#### RAOs for Public Health Protection

- Prevent contact with, or inhalation of, volatiles from contaminated groundwater.

#### RAOs for Environmental Protection

- Restore ground water aquifer to pre-disposal/pre-release conditions, to the extent practicable.
- Remove the source of ground or surface water contamination.

## **Soil**

### RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of or exposure from contaminants volatilizing from contaminants in soil.

### RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

## **Soil Vapor**

### RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

## **2.6 Remaining Contamination**

As part of redevelopment, the majority of the Site was excavated to 15 feet bgs except for a small portion of land along the northern boundary and northeast corner that remains at grade level, and the approximately 20 foot wide area of land along the western boundary of the Site (the Track 4 Remedial Area) that was excavated between zero (0) and 15 feet bgs. Soil was not excavated or removed to the base depth in these areas due to the inability to remove such soils without jeopardizing the structural integrity of the adjacent building foundations. Since the soil in these portions of the Site could not be excavated to 15 feet bgs, residual contamination remains at the Site. In addition, off-Site soil vapor contamination was documented in the RI.

In order to achieve the maximum excavation depth of 15 feet below grade surface in the Track 1 and 2 areas across the majority of the Site, extensive dewatering was completed, which has demonstrated a significant reduction in on-Site and off-Site groundwater contamination as a result of the remedy. Following the completion of excavation, ORC<sup>®</sup> Advanced<sup>®</sup> Pellets were applied in the open excavation located in the approximately 70 by 75 foot area to the immediate east of the Track 4 Ramp Area.

Approximately 330.6 pounds of ORC Advanced® Pellets was applied to the base depth of excavation in the aforementioned area. The ORC Advanced® Pellets were thoroughly mixed with approximately one (1) foot of subsurface soils to enhance natural attenuation and expedite the degradation of any remaining volatile and semi-volatile organic compounds present in the groundwater. However, the petroleum-impacted soil that remains along the western boundary of the Site could not be excavated extensively below the groundwater table and subsequently could not receive the ORC treatment.

In-situ chemical injections were performed in the western Track 4 Area from October 18 through October 21, 2016 to address and remediate the “source material” that was previously identified in the RI. Prior to the start of the chemical injections, ERFS was on-Site and installed one (1) temporary monitoring well, identified as TMW-2, within the treatment area in the western portion of the Site. Prior to injections, Brinkerhoff collected a groundwater sample from the permanent off-Site monitoring well, SMW-1, and from the temporary monitoring well, TMW-2. ERFS advanced a total of 12 chemical injection points between nine (9) and 15 feet bgs within the treatment area.

A total of 1,263 gallons of oxidizer (hydrogen peroxide aqueous solution) and 162 gallons of catalyst (ferrous sulfate) aqueous solution were injected into the subsurface. Additionally, once the “source material” was remediated as described in the Chemical Injection Plan, a Remedial Composite Cover System consisting of a concrete building slab and a layer of Recycled Concrete Aggregate (RCA) and/or virgin quarry stone was installed. In addition, a Preprufe 300R waterproofing membrane, manufactured by Grace, was installed between the concrete building slab and RCA and/or virgin quarry stone. The Composite Cover System and the soil vapor barrier membrane were also installed along the exterior portions of the sidewalls of the Track 4 Area.

Despite the extensive soil and groundwater remediation, some residual contamination in the soil and groundwater remains at the Site and the nature and extent of the remaining contamination is discussed below. In addition, an off-Site source of chlorinated-related compounds in soil vapor is encroaching onto the Site. Engineering Controls (EC) such as a protective cap in the Track 4 Area and a vapor barrier membrane

in the Track 4 and Track 2 Areas were installed to protect human health and the environment from the remaining contamination.

A more detailed description of the residual contamination in the soil and groundwater that remains at the Site, and the nature and extent of the remaining contamination is discussed below.

### 2.6.1 Soil

The soil that remains at 15 feet below grade surface across majority of the Site consists of brown, gray, and black fine sand with varying amounts of silt, clay and peat. The soil that remains at grade level along the northern boundary and around the northeast corner of the Site consists of brown to black fine to coarse sand with varying amounts of silt, brick, and gravel fragments.

A total of 46 samples were collected across the Site. The endpoint samples EP-1 through EP-40, DUP-1, and DUP-2 were analyzed for Target Analyte List (TAL) and Target Compound List (TCL) parameters. Additionally, endpoint samples EP-18 through EP-40, DUP-1, DUP-2, CR-1, CR-2, and CR-3 were analyzed for hexavalent and trivalent chromium. All endpoint sample results were compared to the NYSDEC Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs), the NYSDEC Restricted-Residential Use (Track 2) SCOs, and the New York Protection of Groundwater (NYPGW) Standards.

Base endpoint samples EP-2 through EP-8, EP-9b, EP-12, EP-14, EP-17, EP-19, EP-27, CR-1, CR-2, and CR-3 detected no compounds exceeding the NYSDEC Track 1 SCOs, with the exception of methylene chloride in endpoint samples EP-1 and EP-5 and acetone in endpoint samples EP-1, EP-5, EP-6, EP-7, EP-8, EP-17 and EP-28. These two (2) compounds are common laboratory contaminants; therefore, the aforementioned endpoint samples still achieve NYSDEC Track 1 SCOs. The Track 1 endpoint soil analytical results are shown on **Figure 7**.

Base endpoint samples EP-11, EP-13, EP-15, EP-16, EP-21, and EP-29 through EP-33 achieved the NYSDEC Track 2 SCOs. Several compounds consisting of benzo[a]anthracene and benzo[a]pyrene in EP-16 and benzo[b]fluoranthene in EP-21 were detected at concentrations exceeding the NYSDEC Track 2 SCOs. However, based

on NYSDEC's interpretation of the regulatory definition of the Track 2 Standards, the aforementioned samples still achieve NYSDEC Track 2 SCOs because the soil samples were collected at or deeper than 15 feet bgs. The majority of the property was remediated to NYSDEC Track 2 SCOs and the Track 2 endpoint soil analytical results are shown on **Figure 8**.

Base endpoint sample EP-39, located within the Track 4 Remedial Area, did not achieve the NYSDEC Track 2 SCOs but this area has been covered with the vapor barrier membrane and the composite cover system. Polycyclic aromatic hydrocarbons consisting of benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indo(1,2,3-cd)pyrene in endpoint sample EP-39 were detected exceeding the Track 2 SCOs. Additionally, a small strip of land along the northern boundary of the Site and an approximate 20 foot wide area of land along the western boundary of the Site was remediated to Track 4 acceptable levels. The Track 4 area endpoint soil analytical results are shown on **Figure 9**.

Sidewall samples EP-1, EP-9, EP-10, EP-18, EP-20, EP-22 through EP-26, EP-28, and EP-33 detected no compounds exceeding the NYSDEC Track 1 SCOs, with the exception of acetone and methylene chloride. However, as discussed above, these are common laboratory contaminants.

One (1) sidewall sample, EP-20, detected compounds consisting of 1,2,4-trimethylbenzene and m,p-xylenes above the NYSDEC Track 2 SCOs and 1,3,5-trimethylbenzene, benzene, ethylbenzene, o-xylene, and toluene were detected above the NYPGW Standards. Sidewall sample EP-20 was collected at 9.5 feet bgs along the northeastern sidewall of the Site within the Track 4 Remedial Area. However, structural grout injections were horizontally injected within this depth interval along the entire sidewall and the area was completely immobilized by the concrete grout injections. After the grout injections were completed, Brinkerhoff performed a soil investigation within the vicinity of EP-20 to determine if soil was present between the wood lagging and the adjacent building. However, concrete was observed surrounding the entire area of the EP-20 sidewall sample location and only an insignificant amount of soil was present between the wood lagging and the concrete to the southwest of EP-20. Based on these findings along with the fact that the composite cover system completely covered this Track 4

Area, the previously identified contamination in EP-20 was completely immobilized and NYSDEC required no further action.

The Endpoint Soil Sample Collection Summary is provided as **Table 1** and the Endpoint Soil Sample Result Summary for all endpoint samples in the Track 1, Track 2, and Track 4 Areas are provided in **Tables 2** through **26**. Additionally, **Figures 7** through **9** summarize the results of all soil samples collected at the Site after completion of the remedial action. Analytical laboratory data packages are provided as **Appendix IV**.

### 2.6.2 Groundwater

As mentioned above, soil was excavated to approximately 15 feet bgs in the Track 1 and 2 Areas across the majority of the Site. As part of excavating the Track 1 and 2 areas to 15 feet below grade surface, extensive dewatering was required across the Site, which likely removed the majority of the contaminated groundwater.

Prior to the start of construction, a temporary off-Site monitoring well was installed down-gradient of the Site on August 20, 2015. Per the NYSDEC-approved RAWP, one (1) groundwater sample, identified as TMW-1, was collected to establish baseline groundwater conditions before the start of remediation. The pre-construction groundwater sample, TMW-1, was analyzed for TCL SVOCs and VOCs. The analytical results detected one (1) SVOC (Napthalene) and several VOCs (1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenze, Acetone, Ethylbenzene, Isopropylbenzene, Methylene Chloride, n Butyl Benzene, sec-Buthylbenzene, and Toluene) at concentrations exceeding the NYSDEC Ambient Groundwater Quality Standards (NYSDEC GWQS). A permanent off-Site monitoring well, identified as SMW-1, was installed down-gradient of the Site on April 28, 2016.

In addition, NYSDEC required two (2) additional groundwater samples be collected prior to the start of the in-situ chemical injections. On October 18, 2016, one (1) groundwater sample was collected from the permanent off-Site monitoring well SMW-1 and one (1) groundwater sample, identified as TMW-2, was collected from an additional temporary on-Site monitoring well that was installed in the Track 4 Area (western ramp area). Both pre-injection groundwater samples were analyzed for TCL VOCs and the results were compared to the NYSDEC GWQS. The analytical results from pre-injection

groundwater sample SMW-1 indicated that one (1) compound, n-Propyl Benzene, was detected at above the NYSDEC GWQS; however, the compound was detected at a significantly lower concentration than the pre-construction groundwater sample. The analytical results from the pre-injection groundwater sample TMW-2 indicated that no VOCs were detected above the NYSDEC GWQS. Therefore, both the on-Site and off-Site groundwater results revealed significant reductions as a result of the remedy implemented.

The in-situ chemical injections occurred in the western Track 4 Area from October 18, 2016 through October 21, 2016. Following the completion of the injections, a post-injection groundwater sample was collected from the permanent off-Site monitoring well SMW-1 on November 3, 2016. The post-injection groundwater sample, SMW-1, was analyzed for TCL VOCs. The analytical results from the post-injection groundwater sample, SMW-1, indicated that no VOCs were detected above the NYSDEC GWQS. In addition, all detected compounds in the off-Site post-injection groundwater sample showed decreasing concentrations in comparison to the pre-construction and pre-injection groundwater samples.

Additionally, as per NYSDEC request, one (1) permanent On-Site monitoring well, identified as SMW-2, was installed on December 15, 2016. SMW-2 was installed in the same location as temporary monitoring well TMW-2, in the western portion of the Track 4 ramp area.

In total, one (1) temporary and one (1) permanent monitoring well was installed On-Site in the western Track 4 ramp area and Off-Site in the sidewalk down-gradient of the Site.

**Tables 27 and 28** and **Figure 10** summarize the results of the groundwater samples that were collected prior to and after the remedial action. Analytical laboratory data packages are provided as **Appendix V**.

### 2.6.3 Soil Vapor

Soil vapor sampling is not required as a part of the Monitoring and Sampling Plan (Section 4.0 of this SMP) because a vapor barrier membrane was installed as an engineering control to address the soil vapor intrusion pathway in the Track 2 and Track

4 Areas of the site. Even though no engineering controls are required by NYSDEC and NYSDOH for the Track 1 Area of the Site, a waterproofing/vapor barrier membrane was incorporated into the building foundation slab within the Track 1 Area and the building foundation is below the groundwater table. Additionally, the Track 1 Area of the Site is within the lowest level of the building and a below-grade ventilated parking structure was installed in accordance with New York City Construction Codes.

### **3.0 INSTITUTIONAL AND ENGINEERING CONTROL PLAN**

#### **3.1 General**

Since remaining contamination exists at the Site and is emanating onto the Site from off-Site, Institutional Controls (ICs) and Engineering Controls (ECs) are required to protect human health and the environment. This IC/EC Plan describes the procedures for the implementation and management of all IC/ECs at the Site. The IC/EC Plan is one component of the SMP and is subject to revision by the NYSDEC.

This plan provides:

- A description of all IC/ECs on the Site;
- The basic implementation and intended role of each IC/EC;
- A description of the key components of the ICs set forth in the Environmental Easement;
- A description of the controls to be evaluated during each required inspection and periodic review;
- A description of plans and procedures to be followed for implementation of IC/ECs, such as the implementation of the Excavation Work Plan (EWP) (as provided in **Appendix VI**) for the proper handling of remaining contamination that may be disturbed during maintenance or redevelopment work on the Site; and
- Any other provisions necessary to identify or establish methods for implementing the IC/ECs required by the Site remedy, as determined by the NYSDEC.

### **3.2 Institutional Controls**

A series of ICs is required by the Decision Document to: (1) implement, maintain and monitor Engineering Control systems; (2) prevent future exposure to remaining contamination; and, (3) limit the use and development of the Site to restricted residential, commercial and industrial uses only. Adherence to these ICs on the Site is required by the Environmental Easement and will be implemented under this SMP. ICs identified in the Environmental Easement may not be discontinued without an amendment to or extinguishment of the Environmental Easement. The IC boundaries are shown on **Figure 11**. These ICs are:

- The property may be used for: restricted residential, commercial and industrial uses;
- All ECs must be operated and maintained as specified in this SMP;
- All ECs must be inspected at a frequency and in a manner defined in the SMP.
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the New York State Department of Health (NYSDOH) and NYSDOHMH to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department.
- Groundwater monitoring must be performed as defined in this SMP;
- Data and information pertinent to Site management must be reported at the frequency and in a manner as defined in this SMP;
- All future activities that will disturb remaining contaminated material must be conducted in accordance with this SMP;
- Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in this SMP;

- Operation, maintenance, monitoring, inspection, and reporting of any groundwater well or other physical component of the remedy, such as the vapor barrier and cover system shall be performed as defined in this SMP;
- Access to the Site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Environmental Easement.
- The potential for vapor intrusion must be evaluated for any buildings developed in the area within the IC boundaries noted on **Figure 11**, and any potential impacts that are identified must be monitored or mitigated; and
- Vegetable gardens and farming on the Site are prohibited;

### **3.3 Engineering Controls**

#### 3.3.1 Composite Cover System – Track 4 Remedial Area

Exposure to remaining soil contamination in the Track 4 Remedial Area at the Site is prevented by a composite cover system placed over the entire Track 4 Remedial Area. Since the Track 4 Remedial Area could not be safely excavated and removed without jeopardizing the structural integrity of the adjacent building foundations, an engineered composite cover system was implemented to prevent human exposure to the residual soils. The Track 4 Remedial Area cover system consists of at a minimum, a four (4) to six (6)-inch concrete foundation slab and an approximate one (1) to two (2)-foot layer of RCA and/or virgin quarry stone. A second engineering control serves the Track 4 and Track 2 Areas of the Site, the vapor barrier membrane, which is further discussed in the section below. No engineering controls are required by NYSDEC and NYSDOH in the Track 1 Area to address the residual soil contamination. However, as part of development, construction of a composite cover system consisting of a concrete foundation slab overlying a vapor barrier membrane, a concrete rat slab and a layer of RCA and/or virgin quarry stone was also installed in the Track 1 and Track 2 Areas. **Figure 12** presents the location of the cover system and a cross-section. The EWP

provided in **Appendix VI** outlines the procedures required to be implemented in the event the cover system is breached, penetrated or temporarily removed, and any underlying remaining contamination is disturbed. Procedures for the inspection of this cover are provided in the Monitoring and Sampling Plan included in Section 4.0 of this SMP. Any work conducted pursuant to the EWP must also be conducted in accordance with the procedures defined in a Health and Safety Plan (HASP), provided as **Appendix VII**, and an associated Community Air Monitoring Plan (CAMP) prepared for the Site and provided as **Appendix VIII**.

### 3.3.2 Vapor Barrier System – Track 2 and Track 4 Remedial Areas

Exposure to remaining soil vapor contamination in the Track 2 and Track 4 Remedial Areas of the Site is prevented by a vapor barrier system to address the soil vapor intrusion pathway, in lieu of an evaluation of soil vapor intrusion. The vapor barrier system consisted of the installation of the Preprufe 300R waterproofing/vapor barrier membrane, manufactured by Grace, at the base of excavation across the Track 2 and Track 4 Areas and along the exterior portions of the sidewalls in the Track 2 and Track 4 Areas. NYSDEC and NYSDOH determined that the Track 1 Area of the Site does not require an engineering control to address remaining soil vapor contamination; however, as part of development and in lieu of an evaluation of soil vapor intrusion, a waterproofing/vapor barrier membrane was incorporated into the building foundation at the base and along the exterior portions of the sidewalls in the Track 1 Area. Additionally, the building foundation slab was installed below the groundwater table and the Track 1 Area of the Site is within the lowest level of the building in which a below-grade ventilated parking structure was installed in accordance with New York City Construction Codes.

### 3.3.3 Monitored Natural Attenuation of Groundwater

As a part of the remedial action for the Site, temporary off-Site and on-Site monitoring wells were installed and sampled. A temporary off-Site monitoring well (TMW-1) was installed down-gradient of the Site and was sampled prior to the commencement of construction. A temporary on-Site monitoring well (TMW-2) was also

installed in the western Track 4 Area (ramp area) and a permanent off-Site monitoring well (SMW-1) was installed down-gradient of the Site and both wells were sampled prior to commencement of the in-situ chemical injection event. The groundwater sampling results indicated a significant decreasing trend. In addition, as requested by the NYSDEC, a permanent on-Site monitoring well (SMW-2) was installed in the western Track 4 Area (ramp area).

Off-Site and on-Site groundwater monitoring activities to assess natural attenuation will continue quarterly for at least two (2) years, as determined by the NYSDEC with consultation with NYSDOH, until residual groundwater concentrations are found to exhibit a decreasing trend or have become asymptotic at an acceptable level. In the event that groundwater monitoring data indicates that monitoring for natural attenuation may no longer be required, a proposal to discontinue the system will be submitted by the remedial party. Monitoring will continue until permission to discontinue is granted in writing by the NYSDEC. If groundwater contaminant levels become asymptotic at a level that is not acceptable to the NYSDEC, additional treatment and/or control measures will be evaluated.

### **3.3.4 Criteria for Completion of Remediation/Termination of Remedial Systems**

Generally, remedial processes are considered completed when monitoring indicates that the remedy has achieved the remedial action objectives identified by the decision document. The framework for determining when remedial processes are complete is provided in Section 6.4 of NYSDEC DER-10.

#### **3.3.4.1 - Composite Cover System – Track 4 Remedial Area**

The composite cover system that was installed in the Track 4 Remedial Area is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in accordance with this SMP in perpetuity.

#### 3.3.4.2 - Vapor Barrier System – Track 2 and Track 4 Remedial Areas

The vapor barrier system that was employed in the Track 2 and Track 4 Areas of the Site is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in accordance with this SMP in perpetuity.

#### 3.3.4.3 - Monitored Natural Attenuation of Groundwater

Groundwater monitoring activities to assess natural attenuation will continue quarterly for at least two (2) years, as determined by the NYSDEC with consultation with NYSDOH, until residual groundwater concentrations are found to exhibit a decreasing trend or have become asymptotic at an acceptable level.. In the event that monitoring data indicates that monitoring for natural attenuation may no longer be required, a proposal to discontinue the system will be submitted by the remedial party. Monitoring will continue until permission to discontinue is granted in writing by the NYSDEC. If groundwater contaminant levels become asymptotic at a level that is not acceptable to the NYSDEC, additional treatment and/or control measures will be evaluated.

## **4.0 MONITORING AND SAMPLING PLAN**

### **4.1 General**

This Monitoring and Sampling Plan describes the measures for evaluating the overall performance and effectiveness of the remedy. This Monitoring and Sampling Plan may only be revised with the approval of the NYSDEC. Details regarding the sampling procedures, data quality usability objectives, analytical methods, etc. for all samples collected as part of site management for the Site are included in the Quality Assurance Project Plan provided in **Appendix IX**.

This Monitoring and Sampling Plan describes the methods to be used for:

- Sampling and analysis of all appropriate media (e.g., groundwater, indoor air, soil vapor, soils);
- Assessing compliance with applicable NYSDEC standards, criteria and guidance (SCGs), particularly groundwater standards and Part 375 SCOs for soil; and

Evaluating Site information periodically to confirm that the remedy continues to be effective in protecting public health and the environment.

To adequately address these issues, this Monitoring and Sampling Plan provides information on:

- Sampling locations, protocol and frequency;
- Information on all designed monitoring systems;
- Analytical sampling program requirements;
- Inspection and maintenance requirements for monitoring wells;
- Monitoring well decommissioning procedures; and
- Annual inspection and periodic certification.

Reporting requirements are provided in Section 7.0 of this SMP.

## 4.2 Site -Wide Inspection

Site-wide inspections will be performed at a minimum of once per year. Modification to the frequency or duration of the inspections will require approval from the NYSDEC. Site-wide inspections will also be performed after all severe weather conditions that may affect ECs or monitoring devices. During these inspections, an inspection form will be completed as provided in **Appendix X** – Site Management Forms. The form will compile sufficient information to assess the following:

- Compliance with all ICs, including Site usage;
- An evaluation of the condition and continued effectiveness of ECs;
- General Site conditions at the time of the inspection;
- The site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection; and
- Confirm that Site records are up to date.

Inspections of all remedial components installed at the Site will be conducted. A comprehensive Site-wide inspection will be conducted and documented according to the SMP schedule, regardless of the frequency of the Periodic Review Report. The inspections will determine and document the following:

- Whether ECs continue to perform as designed;
- If these controls continue to be protective of human health and the environment;
- Compliance with requirements of this SMP and the Environmental Easement;
- Achievement of remedial performance criteria; and
- If Site records are complete and up to date; and

Reporting requirements are outlined in Section 7.0 of this plan.

Inspections will also be performed in the event of an emergency. If an emergency, such as a natural disaster or an unforeseen failure of any of the ECs occurs that reduces or has the potential to reduce the effectiveness of ECs in place at the Site, verbal notice to the NYSDEC must be given by noon of the following day. In addition, an inspection of the Site will be conducted within 5 days of the event to verify the effectiveness of the IC/ECs implemented at the Site by a qualified environmental professional, as determined by the NYSDEC. Written confirmation must be provided to the NYSDEC within 7 days of the event that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.

#### **4.3 Post-Remediation Groundwater Monitoring and Sampling**

Prior to beginning the remedial action, a groundwater sample was collected from a temporary off-Site monitoring well located down-gradient of the Site, to establish baseline conditions. Additionally, prior to the start of the in-situ chemical injections, additional groundwater samples were collected from a permanent off-Site monitoring well located down-gradient of the Site and from a temporary on-Site monitoring well located in the western Track 4 Area, to establish pre-chemical injection groundwater conditions both on- and off-Site. Following completion of the remediation, a groundwater sample was collected from the permanent off-Site monitoring well and the analytical results showed a decreasing trend compared to the groundwater analytical results from the start of remediation and prior to the chemical injections. Additional post-remediation groundwater sampling will occur quarterly for at least two (2) years, as determined by NYSDEC with consultation NYSDOH, to make sure the groundwater contamination does not rebound. If residual groundwater concentrations are found to exhibit a decreasing trend or have become asymptotic at an acceptable level over an extended period, monitoring for natural attenuation may no longer be required and a proposal to discontinue the system will be submitted by the remedial party. If rebounding effects are observed during the post-remediation groundwater monitoring, additional treatment will be required per NYSDEC's approval of the Chemical Injection Plan, dated September 12, 2016. The following table discusses the sample location, analytical

parameters and schedule as required by NYSDEC. Modification to the frequency or sampling requirements will require approval from the NYSDEC.

**Post Remediation Sampling Requirements and Schedule Table**

<b>Sampling Location</b>	<b>Analytical Parameters</b>	<b>Schedule</b>
Off-Site Monitoring Well (SMW-1)	VOCs (EPA Method 8260)	Quarterly for at least two (2) years
On-Site Monitoring Well (SMW-2)	VOCs (EPA Method 8260)	Quarterly for at least two (2) years

The off-Site and on-Site monitoring wells will be sampled in accordance with the United States Environmental Protection Agency (USEPA) Low Stress/Low Flow Groundwater Sampling Protocol, dated January 19, 2010, via a submersible pump with dedicated Teflon<sup>®</sup> tubing. Prior to purging, an interface probe, capable of detecting free-phase product thickness of 0.01 feet, will be used to gauge the well. Purged water will be placed in DOT-approved 55-gallon drums for future off-Site disposal. The low stress/low flow sampling procedure will be used to reduce turbidity of the groundwater samples.

Groundwater samples will be collected directly from the dedicated Teflon<sup>®</sup> tubing via a submersible pump and will be transferred directly into laboratory-supplied glassware. The groundwater sample bottles will be placed in a cooler on ice, transported to Brinkerhoff’s office, and placed in a designated refrigerator until picked up by Accredited. Field blanks, consisting of laboratory-supplied water, will be poured over the decontaminated sampling equipment prior to sampling. Trip blanks consisting of laboratory-supplied vials of water will accompany the samples to the laboratory. These samples will be analyzed for VOCs.

Detailed sample collection and analytical procedures and protocols are provided in **Appendix XI – Field Sampling Plan** and **Appendix IX – Quality Assurance Project Plan**.

The table below summarizes the off-Site and on-Site well identification numbers, location, depth, diameter and screened interval of the wells.

**Monitoring Well Construction Detail Table**

Monitoring Well ID	Well Location	Well Diameter (inches)	Elevation (feet below grade surface)			
			Casing	Surface	Screen Top	Screen Bottom
SMW-1	Off-Site Monitoring Well (SMW-1)	2	0-20	0	5	20
SMW-2	On-Site Monitoring Well (SMW-2)	2	0-20	0	5	20

The off-Site and on-Site monitoring well construction logs are provided in **Appendix III**.

If biofouling or silt accumulation occurs in the off-Site or on-Site monitoring wells, the wells will be physically agitated/surged and redeveloped. Additionally, the monitoring wells will be properly decommissioned and replaced, if an event renders the well unusable.

Repairs and/or replacement of the well will be performed based on assessments of structural integrity and overall performance.

The NYSDEC will be notified prior to any repair or decommissioning of the monitoring wells for the purpose of replacement, and the repair or decommissioning and replacement process will be documented in the subsequent Periodic Review Report. Well decommissioning without replacement will be done only with the prior approval of the NYSDEC. Well abandonment will be performed in accordance with NYSDEC’s guidance entitled “CP-43: Groundwater Monitoring Well Decommissioning Procedures.” Monitoring wells that are decommissioned because they have been rendered unusable will be replaced in kind in the nearest available location, unless otherwise approved by the NYSDEC.

The sampling frequency may only be modified with the approval of the NYSDEC. This SMP will be modified to reflect changes in sampling plans approved by the NYSDEC.

Deliverables for the groundwater monitoring program are specified in Section 7.0 – Reporting Requirements.

#### **4.4 Soil Vapor Intrusion Sampling/Evaluation**

Soil vapor sampling is not required as a part of the Monitoring and Sampling Plan (Section 4.0 of this SMP) because a vapor barrier membrane was installed as an engineering control to address the soil vapor intrusion pathway in the Track 2 and Track 4 Areas of the site. No engineering controls are required by NYSDEC or NYSDOH for the Track 1 Area of the Site; however, the following items consist of the soil vapor intrusion for the Track 1 portion of the site: the building foundation is below the groundwater table; a waterproofing/vapor barrier membrane was incorporated into the building foundation; and the Track 1 portion of the Site is within the lowest level of the building and a below-grade ventilated parking structure was installed in accordance with New York City Construction Codes.

#### **4.5 Monitoring and Sampling Protocol**

All sampling activities will be recorded in a field book and associated sampling log as provided in **Appendix X - Site Management Forms**. Other observations (e.g., groundwater monitoring well integrity, etc.) will be noted on the sampling log. The sampling log will serve as the inspection form for the monitoring network. Additional detail regarding monitoring and sampling protocols are provided in the Site-specific Field Sampling Plan provided as **Appendix XI**.

## **5.0 OPERATION AND MAINTENANCE PLAN**

### **5.1 General**

The Site remedy does not rely on any mechanical systems, such as groundwater treatment systems, sub-slab depressurization systems or air sparge/soil vapor extraction systems to protect public health and the environment. Therefore, the operation and maintenance of such components is not included in this SMP.

## **6.0 PERIODIC ASSESSMENTS/EVALUATIONS**

### **6.1 Climate Change Vulnerability Assessment**

Increases in both the severity and frequency of storms/weather events, an increase in sea level elevations along with accompanying flooding impacts, shifting precipitation patterns and wide temperature fluctuation, resulting from global climactic change and instability, have the potential to significantly impact the performance, effectiveness and protectiveness of a given Site and associated remedial systems. Vulnerability assessments provide information so that the Site and associated remedial systems are prepared for the impacts of the increasing frequency and intensity of severe storms/weather events and associated flooding.

This section provides a summary of vulnerability assessments that will be conducted for the Site during periodic assessments, and briefly summarizes the vulnerability of the Site and/or engineering controls to severe storms/weather events and associated flooding.

Since the entire Site is capped as part of development with a cover system, there is limited vulnerability for the Site to be affected by flooding. The cover system and waterproofing membrane, installed at the base of the building foundation and along all below-grade foundation walls, were designed to be impermeable. Additionally, there are no groundwater treatment systems, sub-slab depressurization systems or air sparge/soil vapor extraction systems that are part of the Site remedy, thus the Site's vulnerability to be affected by flood events or storm surges is very limited.

The Site is not located within a flood plain and the topography of the Site and surrounding properties are all generally flat. No elevated surfaces surround the Site. Since the building encompasses majority of the Site except for the northern boundary, there are limited areas that are prone to flooding during severe weather events. Rainfall during severe weather events is expected to run off the impervious cover along the northern boundary of the Site into New York City storm drains along Third Avenue. However, since the groundwater table is high, the waterproofing membrane over a concrete rat slab was a required design element for the Site building.

The potential for Site erosion does not exist since the building encompasses majority of the Site and the northern boundary of the Site is capped with an at-grade concrete slab. No exposed soil exists at the Site.

The potential for wind damage does not exist since the building encompasses majority of the Site and there are no remedial systems in place that have the potential to be affected.

## **6.2 Green Remediation Evaluation**

NYSDEC's DER-31 Green Remediation requires that green remediation concepts and techniques be considered during all stages of the remedial program including Site management, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology. This section of the SMP provides a summary of any green remediation evaluations to be completed for the Site during site management, and as reported in the Periodic Review Report (PRR).

The Site remedy does not rely on any mechanical systems, such as groundwater treatment systems, sub-slab depressurization systems or air sparge/soil vapor extraction systems to protect public health and the environment. Therefore, waste generation, energy usage, potential emissions, and water usage are not of concern in regards to implementation, operation, and maintenance of the selected remedy for this Site.

### 6.2.1 Building Operations

The on-Site building will be operated and maintained to provide for the most efficient operation of the remedy, while minimizing energy, waste generation and water consumption.

### 6.2.2 Frequency of System Checks, Sampling and Other Periodic Activities

Transportation to and from the Site in order to collect samples or ship samples to a laboratory for analysis have direct and/or inherent energy costs. The means of these periodic activities have been prepared so that these tasks can be accomplished in a manner that does not impact remedy protectiveness but reduces expenditure of energy or resources.

### 6.2.3 Metrics and Reporting

As discussed in Section 7.0 and as shown in **Appendix X** – Site Management Forms, information on energy usage, solid waste generation, transportation and shipping, water usage and land use and ecosystems will be recorded to facilitate and document consistent implementation of green remediation during site management and to identify corresponding benefits; a set of metrics has been developed.

### **6.3 Remedial System Optimization**

A Remedial Site Optimization (RSO) study will be conducted any time that the NYSDEC or the remedial party requests in writing that an in-depth evaluation of the remedy is needed. An RSO may be appropriate if any of the following occur:

- The remedial actions have not met or are not expected to meet RAOs in the time frame estimated in the Decision Document;
- The management and operation of the remedial system is exceeding the estimated costs;
- The remedial system is not performing as expected or as designed;
- Previously unidentified source material may be suspected;
- Plume shift has potentially occurred;
- Site conditions change due to development, change of use, change in groundwater use, etc.;
- There is an anticipated transfer of the site management to another remedial party or agency; and
- A new and applicable remedial technology becomes available.

An RSO will provide a critique of a site's conceptual model, give a summary of past performance, document current cleanup practices, summarize progress made toward the Site's cleanup goals, gather additional performance or media specific data and information and provide recommendations for improvements to enhance the ability of the present system to reach RAOs or to provide a basis for changing the remedial strategy.

The RSO study will focus on overall Site cleanup strategy, process optimization and management with the intent of identifying impediments to cleanup and improvements to Site operations to increase efficiency, cost effectiveness and remedial time frames. Green remediation technology and principals are to be considered when performing the RSO.

## 7.0. REPORTING REQUIREMENTS

### 7.1 Site Management Reports

All site management inspection, maintenance and monitoring events will be recorded on the appropriate site management forms provided in **Appendix X**. These forms are subject to NYSDEC revision.

All applicable inspection forms and other records, including media sampling data and system maintenance reports, generated for the Site during the reporting period will be provided in electronic format to the NYSDEC in accordance with the requirements of the table below and summarized in the Periodic Review Report.

**Schedule of Interim Monitoring/Inspection Reports Table**

<b>Task/Report</b>	<b>Reporting Frequency*</b>
Post-Remediation Off-Site and On-Site Groundwater Monitoring Report	Quarterly for at least two (2) years
Periodic Review Report	Annually, or as otherwise determined by the Department.

\* The frequency of events will be conducted as specified until otherwise approved by the NYSDEC.

All interim monitoring/inspections reports will include, at a minimum:

- Date of event or reporting period;
- Name, company, and position of person(s) conducting monitoring/inspection activities;
- Description of the activities performed;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet);
- Type of samples collected (e.g., sub-slab vapor, indoor air, outdoor air, etc);

- Copies of all field forms completed (e.g., well sampling logs, chain-of-custody documentation, etc.);
- Sampling results in comparison to appropriate standards/criteria;
- A figure illustrating sample type and sampling locations;
- Copies of all laboratory data sheets and the required laboratory data deliverables required for all points sampled (to be submitted electronically in the NYSDEC-identified format);
- Any observations, conclusions, or recommendations; and
- A determination as to whether contaminant conditions have changed since the last reporting event.

Routine maintenance event reporting forms will include, at a minimum:

- Date of event;
- Name, company, and position of person(s) conducting maintenance activities;
- Description of maintenance activities performed;
- Any modifications to the system;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet); and,
- Other documentation such as copies of invoices for maintenance work, receipts for replacement equipment, etc., (attached to the checklist/form).

Non-routine maintenance event reporting forms will include, at a minimum:

- Date of event;
- Name, company, and position of person(s) conducting non-routine maintenance/repair activities;
- Description of non-routine activities performed;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents (included either on the form or on an attached sheet); and
- Other documentation such as copies of invoices for repair work, receipts for replacement equipment, etc. (attached to the checklist/form).

Data will be reported in digital format as determined by the NYSDEC. Currently, data is to be supplied electronically and submitted to the NYSDEC EQuIS™ database in accordance with the requirements found at this link <http://www.dec.ny.gov/chemical/62440.html>.

## **7.2 Periodic Review Report (PRR)**

A PRR will be submitted to the Department beginning sixteen (16) months after the Certificate of Completion is issued. After submittal of the initial Periodic Review Report, the next PRR shall be submitted annually to the Department or at another frequency as may be required by the Department. In the event that the Site is subdivided into separate parcels with different ownership, a single Periodic Review Report will be prepared that addresses the Site described in **Appendix I -Environmental Easement**. The report will be prepared in accordance with NYSDEC's DER-10 and submitted within 30 days of the end of each certification period. Media sampling results will also be incorporated into the Periodic Review Report. The report will include:

- Identification, assessment and certification of all ECs/ICs required by the remedy for the Site.
- Results of the required annual site inspections and severe condition inspections, if applicable.
- All applicable site management forms and other records generated for the Site during the reporting period in the NYSDEC-approved electronic format, if not previously submitted.
- A summary of any discharge monitoring data and/or information generated during the reporting period, with comments and conclusions.
- Data summary tables and graphical representations of contaminants of concern by media (groundwater, soil vapor, etc.), which include a listing of all compounds analyzed, along with the applicable standards, with all exceedances highlighted. These will include a presentation of past data as part of an evaluation of contaminant concentration trends.
- Results of all analyses, copies of all laboratory data sheets, and the required laboratory data deliverables for all samples collected during the reporting period will be submitted in digital format as determined by the NYSDEC. Currently, data is supplied electronically and submitted to the NYSDEC EQUIS<sup>TM</sup> database in accordance with the requirements found at this link: <http://www.dec.ny.gov/chemical/62440.html>.
- A Site evaluation, which includes the following:
  - The compliance of the remedy with the requirements of the Site-specific RAWP, ROD or Decision Document;
  - The operation and the effectiveness of all treatment units, etc., including identification of any needed repairs or modifications;

- Any new conclusions or observations regarding Site contamination based on inspections or data generated by the Monitoring and Sampling Plan for the media being monitored;
- Recommendations regarding any necessary changes to the remedy and/or Monitoring and Sampling Plan; and
- Trends in contaminant levels in the affected media will be evaluated to determine if the remedy continues to be effective in achieving remedial goals as specified by the Decision Document.
- The overall performance and effectiveness of the remedy.

#### 7.2.1 Certification of Institutional and Engineering Controls

Following the last inspection of the reporting period, a Professional Engineer licensed to practice in New York State will prepare, and include in the Periodic Review Report, the following certification as per the requirements of NYSDEC DER-10:

*“For each institutional or engineering control identified for the Site, I certify that all of the following statements are true:*

- *The inspection of the Site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under my direction;*
- *The institutional control and/or engineering control employed at this Site is unchanged from the date the control was put in place, or last approved by the Department;*
- *Nothing has occurred that would impair the ability of the control to protect the public health and environment;*
- *Nothing has occurred that would constitute a violation or failure to comply with any Site management plan for this control;*

- *Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;*
- *If a financial assurance mechanism is required under the oversight document for the Site, the mechanism remains valid and sufficient for the intended purpose under the document;*
- *Use of the Site is compliant with the environmental easement;*
- *The engineering control systems are performing as designed and are effective;*
- *To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the Site remedial program and generally accepted engineering practices; and*
- *The information presented in this report is accurate and complete.*

*I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Ira Pierce, of 3400 Ft. Independence Street, Suite 4F, Bronx, New York, am certifying as the Remedial Party’s Designated Site Representative and I have been authorized and designated by all Site owners/remedial parties to sign this certification for the Site.”*

At the end of each certifying period, as determined by the NYSDEC, the following certification will be provided to the Department:

*“For each institutional identified for the Site, I certify that all of the following statements are true:*

- *The institutional control employed at this Site is unchanged from the date the control was put in place, or last approved by the Department;*

- *Nothing has occurred that would impair the ability of the control to protect the public health and environment;*
- *Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;*
- *Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;*
- *If a financial assurance mechanism is required under the oversight document for the Site, the mechanism remains valid and sufficient for the intended purpose under the document;*
- *Use of the Site is compliant with the environmental easement.*
- *The information presented in this report is accurate and complete.*

*I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Ira Pierce, of 3400 Ft. Independence Street, Suite 4F, Bronx, New York, am certifying as the Owner’s Designated Site Representative and I have been authorized and designated by all site owners to sign this certification for the Site.”*

- *No new information has come to my attention, including groundwater monitoring data from wells located at the Site boundary, if any, to indicate that the assumptions made in the qualitative exposure assessment of off-Site contamination are no longer valid; and*
- *The assumptions made in the qualitative exposure assessment remain valid.*

The signed certification will be included in the Periodic Review Report.

The Periodic Review Report will be submitted, in electronic format, to the NYSDEC Central Office, Regional Office in which the Site is located and the NYSDOH Bureau of Environmental Exposure Investigation. The Periodic Review Report may need to be submitted in hard-copy format, as requested by the NYSDEC project manager.

### **7.3 Corrective Measures Work Plan**

If any component of the remedy is found to have failed, or if the periodic certification cannot be provided due to the failure of an institutional or engineering control, a Corrective Measures Work Plan will be submitted to the NYSDEC for approval. This plan will explain the failure and provide the details and schedule for performing work necessary to correct the failure. Unless an emergency condition exists, no work will be performed pursuant to the Corrective Measures Work Plan until it has been approved by the NYSDEC.

**Notes:**  
 Compounds detected above the NYURU SCOs, and/or the NYPGW Standards are shown:  
 NYURU = New York Unrestricted Use Soil Cleanup Objectives (SCOs) (New York Unrestricted use Criteria current as of 5/2007)  
 NYPGW = NY Protection of Groundwater Standards (Table 375-6.8(b) Dec. 2006)  
 RED = Exceeds NYURU SCOs  
 Highlighted yellow = Exceeds NYPGW Standards  
 Highlighted gray = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices  
 ND = Compounds were not detected  
 NE = Compounds were not detected above the NYURU SCOs or NYPGW Standards  
 mg/kg = Milligram per kilogram  
 ft bgs = Feet below grade surface  
 VOCs = Volatile Organic Compounds  
 SVOCs = Semi-Volatile Organic Compounds  
 Pest/PCBs = Pesticides/Polychlorinated Biphenyl  
 B = Indicates compound found in associated blank  
 U = Indicates compound analyzed for but not detected

**Notes:**

- 1) feet bgs = Feet below grade surface
- 2) TAL-TCL = Target Analyte List-Target Compound List. The TAL-TCL parameters consist of: volatile organic compounds, semi-volatile organic compounds, metals, pesticides, and polychlorinated biphenyls
- 3) Hex Chrom = Hexavalent Chromium
- 4) Tri Chrom = Trivalent Chromium
- 5) Base = Sample collected at the base of excavation
- 6) Sidewall = Sample collected along the sidewall of excavation

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

**Highlighted yellow** = exceeds NYPGW

**Highlighted gray** = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices

Underlined = exceeds NYRRES

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

**Highlighted yellow** = exceeds NYPGW

Highlighted gray = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices

Underlined = exceeds NYRRES

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

Highlighted gray = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilograms

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

Highlighted yellow = exceeds NYPGW

Highlighted gray = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

- E - Concentration exceeds highest calibration standard
- B - Indicates compound found in associated blank
- D - Indicates result is based on a dilution
- H - Alternate peak selection upon analytical review
- J - Indicates estimated value for TICs and all results when detected below the RL
- U - Indicates compound analyzed for but not detected

<b>Wet Chemistry (mg/kg)</b>										
	Cyanide (total)	40	27	27	1.59	U	1.72	U	1.19	U

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

**Highlighted yellow** = exceeds NYPGW

**Underlined** = exceeds NYRRES

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

**Highlighted yellow** = exceeds NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected a concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = no applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)  
**RED** = exceeds NYURU  
**Highlighted yellow** = exceeds NYPGW  
Underlined = exceeds NYRRES  
 ~ = compound was not analyzed  
 NA = no applicable standard  
**Bold** = detected compounds  
 mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard  
 B - Indicates compound found in associated blank  
 D - Indicates result is based on a dilution  
 H - Alternate peak selection upon analytical review  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)  
**RED** = exceeds NYURU  
Underlined = exceeds NYRRES  
 ~ = compound was not analyzed  
 NA = No applicable standard  
**Bold** = detected compounds  
 mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard  
 B - Indicates compound found in associated blank  
 D - Indicates result is based on a dilution  
 H - Alternate peak selection upon analytical review  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or NYPGW

~ = compound was not analyzed

NA = No applicable standard

**Bold** = detected compounds

mg/kg = miligram per kilogram

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or the NYPGW Standards

NA = No applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 200

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or th NYPGW standard

NA = No applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or the NYPGW Standards

NA = No applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or the NYPGW Standards

NA = No applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

B - Indicates compound found in associated blank

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

P - This flag is used for a pesticide/aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported.

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

No compounds were detected at concentrations exceeding the NYURU, NYRRES, or the NYPGW Standards

NA = No applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

**Highlighted yellow** = exceeds NYPGW

NA = no applicable standard

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

D - Indicates result is based on a dilution

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 200)  
 NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)  
 NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)  
**RED** = exceeds NYURU  
 Highlighted yellow = exceeds NYPGW  
 NA = no applicable standard  
 ~ = compound not analyzed  
**Bold** = detected compounds  
 mg/kg = milligrams per kilograms

**Qualifiers:**

U - Indicates compound analyzed for but not detected  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 D - Indicates result is based on a dilution  
 E - Concentration exceeds highest calibration standard  
 B - Indicates compound found in associated blank

**Notes:**

NYURU = NY Unrestricted Use (Table 375-6.8(a) Dec. 2006)

NYRRES = NY Restricted-Residential Use (Table 375-6.8(b) Dec. 2006)

NYPGW = NY Protection of Groundwater (Table 375-6.8(b) Dec. 2006)

**RED** = exceeds NYURU

Highlighted gray = Compound was not detected, but the Method Detection Limit (MDL) was above the NYURU SCOs. According to the laboratory, the elevated Selenium MDLs are due to the high moisture content of the sample matrices

NA = no applicable standard

~ = compound not analyzed

**Bold** = detected compounds

mg/kg = milligrams per kilograms

**Qualifiers:**

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

D - Indicates result is based on a dilution

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

**General Notes:**

NYSDEC GWQS = TOGS 1.1.1 New York State Ambient Grounwater Quality Guidance Values Table 1, 1998

Red = exceeds NYSDEC GWQS

NA = no appicable standard

Bold = detected compounds

ug/L = microgram per liter

Q = qualifier

**Qualifiers:**

E - Concentration exceeds highest calibration standard

B - Indicates compound found in associated blank

D - Indicates result is based on a dilution

H - Alternate peak selection upon analytical review

J - Indicates estimated value for TICs and all results when detected below the RL

U - Indicates compound analyzed for but not detected

**ENVIRONMENTAL EASEMENT GRANTED PURSUANT TO ARTICLE 71, TITLE 36  
OF THE NEW YORK STATE ENVIRONMENTAL CONSERVATION LAW**

**THIS INDENTURE** made this 12<sup>th</sup> day of September, 2016, between Owner(s) HP East 138th Street Housing Development Fund Company, Inc., (the "Grantor Fee Owner") having an office at c/o Housing Partnership Development Corporation, 242 West 36th Street, 3rd Floor, New York, New York 10018, County of New York, State of New York, and East 138th Street LLC, (the "Grantor Beneficial Owner"), having an office at c/o Urban Builders Collaborative, LLC, 334-336 East 110th Street, New York, New York 10029, County of New York, State of New York (collectively, the "Grantor"), and The People of the State of New York (the "Grantee"), acting through their Commissioner of the Department of Environmental Conservation (the "Commissioner", or "NYSDEC" or "Department" as the context requires) with its headquarters located at 625 Broadway, Albany, New York 12233,

**WHEREAS**, the Legislature of the State of New York has declared that it is in the public interest to encourage the remediation of abandoned and likely contaminated properties ("sites") that threaten the health and vitality of the communities they burden while at the same time ensuring the protection of public health and the environment; and

**WHEREAS**, the Legislature of the State of New York has declared that it is in the public interest to establish within the Department a statutory environmental remediation program that includes the use of Environmental Easements as an enforceable means of ensuring the performance of operation, maintenance, and/or monitoring requirements and the restriction of future uses of the land, when an environmental remediation project leaves residual contamination at levels that have been determined to be safe for a specific use, but not all uses, or which includes engineered structures that must be maintained or protected against damage to perform properly and be effective, or which requires groundwater use or soil management restrictions; and

**WHEREAS**, the Legislature of the State of New York has declared that Environmental Easement shall mean an interest in real property, created under and subject to the provisions of Article 71, Title 36 of the New York State Environmental Conservation Law ("ECL") which contains a use restriction and/or a prohibition on the use of land in a manner inconsistent with engineering controls which are intended to ensure the long term effectiveness of a site remedial program or eliminate potential exposure pathways to hazardous waste or petroleum; and

**WHEREAS**, Grantor, is the owner of real property located at the address of 255 East 138th Street in the City of New York, County of Bronx and State of New York, known and designated on the tax map of the New York City Department of Finance as tax map parcel numbers: Block 2333 Lot 1, being the same as that property conveyed to Grantor by deed dated June 26, 2015 and recorded in the City Register of the City of New York at CRFN # 2015000253015. The property subject to this Environmental Easement (the "Controlled Property") comprises approximately 0.35874 +/- acres, and is hereinafter more fully described in the Land Title Survey dated June 9, 2015 and last revised June 15, 2016 prepared by Saied Jalilvand, NYSLLS of Montrose Surveying Co., LLP, which will be attached to the Site Management Plan. The Controlled Property

descriptions are set forth in and attached hereto as Schedule A (Track 2 Area) and Schedule B (Track 4 Area); and

**WHEREAS**, Grantor Beneficial Owner, is the owner of the beneficial interest in the Controlled Property being the same as a portion of that beneficial interest conveyed to Grantor Beneficial Owner by means of a Declaration of Interest and Nominee Agreement dated June 26, 2015 and recorded in the City Register of the City of New York at CRFN # 2015000253016; and

**WHEREAS**, the Department accepts this Environmental Easement in order to ensure the protection of public health and the environment and to achieve the requirements for remediation established for the Controlled Property until such time as this Environmental Easement is extinguished pursuant to ECL Article 71, Title 36; and

**NOW THEREFORE**, in consideration of the mutual covenants contained herein and the terms and conditions of Brownfield Cleanup Agreement Index Number: C203057-05-11 as amended September 4, 2015, Grantor conveys to Grantee a permanent Environmental Easement pursuant to ECL Article 71, Title 36 in, on, over, under, and upon the Controlled Property as more fully described herein ("Environmental Easement").

1. **Purposes.** Grantor and Grantee acknowledge that the Purposes of this Environmental Easement are: to convey to Grantee real property rights and interests that will run with the land in perpetuity in order to provide an effective and enforceable means of encouraging the reuse and redevelopment of this Controlled Property at a level that has been determined to be safe for a specific use while ensuring the performance of operation, maintenance, and/or monitoring requirements; and to ensure the restriction of future uses of the land that are inconsistent with the above-stated purpose.

2. **Institutional and Engineering Controls.** The controls and requirements listed in the Department approved Site Management Plan ("SMP") including any and all Department approved amendments to the SMP are incorporated into and made part of this Environmental Easement. These controls and requirements apply to the use of the Controlled Property, run with the land, are binding on the Grantor and the Grantor's successors and assigns, and are enforceable in law or equity against any owner of the Controlled Property, any lessees and any person using the Controlled Property.

A. (1) The Controlled Property may be used for:

**Residential as described in 6 NYCRR Part 375-1.8(g)(2)(i), Restricted Residential as described in 6 NYCRR Part 375-1.8(g)(2)(ii), Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv) except that portion of the Controlled Property described in Schedule B as the "Track 4 Parcel", which may be used for Restricted Residential as described in 6 NYCRR Part 375-1.8(g)(2)(ii), Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv)**

(2) All Engineering Controls must be operated and maintained as specified in

the Site Management Plan (SMP);

(3) All Engineering Controls must be inspected at a frequency and in a manner defined in the SMP;

(4) The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the New York City Department of Health and Mental Hygiene to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;

(5) Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;

(6) Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in the SMP;

(7) All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP;

(8) Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;

(9) Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP;

(10) Access to the site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.

B. The Controlled Property shall not be used for raising livestock or producing animal products for human consumption, except that portion of the controlled property identified in Schedule B herein (the Track 4 parcel), which shall not be used for Residential purposes as defined in 6 NYCRR 375-1.8(g)(2)(i), and the above-stated engineering controls may not be discontinued without an amendment or extinguishment of this Environmental Easement.

C. The SMP describes obligations that the Grantor assumes on behalf of Grantor, its successors and assigns. The Grantor's assumption of the obligations contained in the SMP which may include sampling, monitoring, and/or operating a treatment system, and providing certified reports to the NYSDEC, is and remains a fundamental element of the Department's determination that the Controlled Property is safe for a specific use, but not all uses. The SMP may be modified in accordance with the Department's statutory and regulatory authority. The Grantor and all successors and assigns, assume the burden of complying with the SMP and obtaining an up-to-date version of the SMP from:

Site Control Section  
Division of Environmental Remediation  
NYSDEC

625 Broadway  
Albany, New York 12233  
Phone: (518) 402-9553

D. Grantor must provide all persons who acquire any interest in the Controlled Property a true and complete copy of the SMP that the Department approves for the Controlled Property and all Department-approved amendments to that SMP.

E. Grantor covenants and agrees that until such time as the Environmental Easement is extinguished in accordance with the requirements of ECL Article 71, Title 36 of the ECL, the property deed and all subsequent instruments of conveyance relating to the Controlled Property shall state in at least fifteen-point bold-faced type:

**This property is subject to an Environmental Easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the Environmental Conservation Law.**

F. Grantor covenants and agrees that this Environmental Easement shall be incorporated in full or by reference in any leases, licenses, or other instruments granting a right to use the Controlled Property.

G. Grantor covenants and agrees that it shall, at such time as NYSDEC may require, submit to NYSDEC a written statement by an expert the NYSDEC may find acceptable certifying under penalty of perjury, in such form and manner as the Department may require, that:

(1) the inspection of the site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under the direction of the individual set forth at 6 NYCRR Part 375-1.8(h)(3).

(2) the institutional controls and/or engineering controls employed at such site:  
(i) are in-place;  
(ii) are unchanged from the previous certification, or that any identified changes to the controls employed were approved by the NYSDEC and that all controls are in the Department-approved format; and

(iii) that nothing has occurred that would impair the ability of such control to protect the public health and environment;

(3) the owner will continue to allow access to such real property to evaluate the continued maintenance of such controls;

(4) nothing has occurred that would constitute a violation or failure to comply with any site management plan for such controls;

(5) the report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

(6) to the best of his/her knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and

(7) the information presented is accurate and complete.

3. Right to Enter and Inspect. Grantee, its agents, employees, or other representatives of the State may enter and inspect the Controlled Property in a reasonable manner and at reasonable times to assure compliance with the above-stated restrictions.

4. Reserved Grantor's Rights. Grantor reserves for itself, its assigns, representatives, and successors in interest with respect to the Property, all rights as fee owner of the Property, including:

A. Use of the Controlled Property for all purposes not inconsistent with, or limited by the terms of this Environmental Easement;

B. The right to give, sell, assign, or otherwise transfer part or all of the underlying fee interest to the Controlled Property, subject and subordinate to this Environmental Easement;

5. Enforcement

A. This Environmental Easement is enforceable in law or equity in perpetuity by Grantor, Grantee, or any affected local government, as defined in ECL Section 71-3603, against the owner of the Property, any lessees, and any person using the land. Enforcement shall not be defeated because of any subsequent adverse possession, laches, estoppel, or waiver. It is not a defense in any action to enforce this Environmental Easement that: it is not appurtenant to an interest in real property; it is not of a character that has been recognized traditionally at common law; it imposes a negative burden; it imposes affirmative obligations upon the owner of any interest in the burdened property; the benefit does not touch or concern real property; there is no privity of estate or of contract; or it imposes an unreasonable restraint on alienation.

B. If any person violates this Environmental Easement, the Grantee may revoke the Certificate of Completion with respect to the Controlled Property.

C. Grantee shall notify Grantor of a breach or suspected breach of any of the terms of this Environmental Easement. Such notice shall set forth how Grantor can cure such breach or suspected breach and give Grantor a reasonable amount of time from the date of receipt of notice in which to cure. At the expiration of such period of time to cure, or any extensions granted by Grantee, the Grantee shall notify Grantor of any failure to adequately cure the breach or suspected breach, and Grantee may take any other appropriate action reasonably necessary to remedy any breach of this Environmental Easement, including the commencement of any proceedings in accordance with applicable law.

D. The failure of Grantee to enforce any of the terms contained herein shall not be deemed a waiver of any such term nor bar any enforcement rights.

6. Notice. Whenever notice to the Grantee (other than the annual certification) or approval from the Grantee is required, the Party providing such notice or seeking such approval shall

IN WITNESS WHEREOF, Grantor Fee Owner has caused this instrument to be signed in its name.

**SCHEDULE "A" PROPERTY DESCRIPTION TRACK 2 PARCEL**

**METES AND BOUNDS DESCRIPTION**  
**Track 2 Cleanup Standards Achieved Area**

ALL that certain plot, piece, or parcel of land situate, lying and being in the Borough and County of the Bronx, City and State of New York, bounded and described as follows:

BEGINNING at a point on the northerly side of East 138<sup>th</sup> Street (100 feet wide), distant 52.81 feet (52.87 feet U.S.) easterly from the corner formed by the intersection of the northerly side of East 138<sup>th</sup> Street with the easterly side of Rider Avenue (60 feet wide);

RUNNING THENCE northerly, parallel with the easterly side of Rider Avenue, 92.08 feet to a point;

RUNNING THENCE easterly, at right angles to the last mentioned course, 147.92 feet (148.08 feet U.S.) to a point;

RUNNING THENCE southerly, at right angles to the last mentioned course, 19.91 feet to a point;

RUNNING THENCE easterly, at right angles to the westerly side of 3<sup>rd</sup> Avenue (Irregular width) 34.92 feet (34.96 feet U.S.) to the westerly side of 3<sup>rd</sup> Avenue;

RUNNING THENCE southerly along the westerly side of 3<sup>rd</sup> Avenue, 10.05 feet to a point;

RUNNING THENCE westerly, at right angles to the last mentioned course, 71.13 feet (71.21 feet U.S.) to a point of curvature;

RUNNING THENCE southwestery and southerly, along a curve bearing to the left, having a radius of 5.60 feet, an arc length of 8.80 feet to a point of tangency;

RUNNING THENCE southerly, at right angles to the northerly side of East 138<sup>th</sup> Street, 56.62 feet to the northerly side of East 138<sup>th</sup> Street;

RUNNING THENCE westerly, along the northerly side of East 138<sup>th</sup> Street, 106.11 feet (106.23 feet U.S.) to the point or place of BEGINNING

The area of above described track is 11,394 sq. ft. or 0.26157 acre.

**SCHEDULE "B" PROPERTY DESCRIPTION TRACK 4 PARCEL**

**METES AND BOUNDS DESCRIPTION**

**Track 4 Cleanup Standards Achieved Area**

ALL that certain plot, piece, or parcel of land situate, lying in the Borough and County of the Bronx, City and State of New York, bounded and described as follows:

BEGINNING at a point on the westerly side of 3<sup>rd</sup> Avenue (Irregular width) distant 76.04 feet northerly from the corner formed by the intersection of the westerly side of 3<sup>rd</sup> Avenue with the northerly side of East 138<sup>th</sup> Street (100 feet wide);

RUNNING THENCE northerly, along the westerly side of 3<sup>rd</sup> Avenue, 3.87 feet to a point;

RUNNING THENCE westerly, along a line forming an angle of 94 degrees 34 minutes 20 seconds on the southwest with the westerly side of 3<sup>rd</sup> Avenue, 32.15 feet (32.19 feet U.S.) to a point;

RUNNING THENCE northerly, along a line forming an angle of 89 degrees 46 minutes 15 seconds on the northeast with the last mentioned course, 21.47 feet to the centerline of the block;

RUNNING THENCE westerly, along the centerline of the block, along a line forming an angle of 85 degrees 11 minutes 55 seconds on the southwest with the last mentioned course, 180.40 feet (180.59 feet U.S.) to a point;

RUNNING THENCE southerly, parallel with the easterly side of Rider Avenue (60 feet wide) 100 feet to the northerly side of East 138<sup>th</sup> Street;

RUNNING THENCE easterly, along the northerly side of East 138<sup>th</sup> Street, 27.81 feet (27.84 feet U.S.) to a point;

RUNNING THENCE northerly, parallel with the easterly side of Rider Avenue 92.08 feet to a point;

RUNNING THENCE easterly, at right angles to the last mentioned course, 147.92 feet (148.08 feet U.S.) to a point;

RUNNING THENCE southerly, at right angles to the last mentioned course, 19.91 feet to a point;

RUNNING THENCE easterly, at right angles to the westerly side of 3<sup>rd</sup> Avenue, 34.92 feet (34.96 feet U.S.) to the westerly side of 3<sup>rd</sup> Avenue, the point or place of BEGINNING.

The area of above described track is 4,221 sq. ft. or 0.09690 acre.

# Accredited Analytical Resources, LLC.

---

03 November 2015

AAR Work Order: 1501878

Doug Harm  
BRINKERHOFF ENVIRONMENTAL  
1805 Atlantic Ave.  
Manasquan, NJ 08736  
Project: 138th Street, Bronx, NY; 10BR188

Enclosed are the results of analyses for samples received by the laboratory on 10/20/2015 15:15. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Daniel Miguel  
Technical Director

New Jersey Certification Number: 12007  
New York Certification Number: 11109  
Pennsylvania Certification Number: 68-02799

This report shall not be reproduced, except in its entirety, without the written consent of Accredited Analytical Resources, LLC.  
The test results included in this report relate only to the samples analyzed.

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-1	1501878-01	Soil	10/19/2015 11:30	10/20/2015 15:15
EP-2	1501878-02	Soil	10/19/2015 11:35	10/20/2015 15:15
EP-3	1501878-03	Soil	10/19/2015 11:40	10/20/2015 15:15
EP-4	1501878-04	Soil	10/19/2015 11:45	10/20/2015 15:15
EP-5	1501878-05	Soil	10/19/2015 11:50	10/20/2015 15:15

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

**Subject:** Chain of Custody Revision - 255 E. 138th Street - 10BR188

Bernie,

For the COC that was submitted yesterday, October 20<sup>th</sup>, 2015 for the project located at 255 East 138<sup>th</sup> Street, Bronx, NY (Name: 10BR188), please change the sample time for each EP sample to be the second time (i.e. EP-1 sampled at 11:30, EP-2 sampled at 11:35, EP-3 sampled at 11:40, etc...).

Please let me know if you have any other questions.

Thanks!

Monica

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-6	1501909-01	Soil	10/22/2015 13:57	10/23/2015 14:30
EP-7	1501909-02	Soil	10/22/2015 14:08	10/23/2015 14:30
EP-8	1501909-03	Soil	10/23/2015 08:15	10/23/2015 14:30

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

## Condition of Samples on Receipt

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	Yes
Samples Hand Delivered	No

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-10	1501923-01	Soil	10/26/2015 12:05	10/27/2015 14:15

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- D Data reported from a dilution
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-11	1501955-01	Soil	10/28/2015 11:20	10/29/2015 15:40

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- D Data reported from a dilution
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-12	1501974-01	Soil	10/30/2015 11:00	11/02/2015 15:50

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-13	1502015-01	Soil	11/04/2015 08:50	11/05/2015 16:25
EP-9b	1502015-02	Soil	11/04/2015 13:15	11/05/2015 16:25

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Analytical Report for Samples

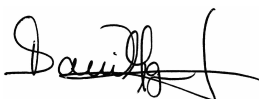

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-14	1502031-01	Soil	11/09/2015 10:40	11/10/2015 14:15
EP-15	1502031-02	Soil	11/09/2015 10:50	11/10/2015 14:15
EP-16	1502031-03	Soil	11/09/2015 11:10	11/10/2015 14:15

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-17	1502101-01	Soil	11/17/2015 11:50	11/18/2015 16:10

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

## Case Narrative

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 3 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street, Bronx, NY) on 12/22/2015 1:50:00 PM.

All analyses were performed within the required holding time.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

Daniel Miguel  
Technical Director

## Methodology Summary

\* Values outside of QC limits  
 ND - Indicates compound analyzed for but not detected  
 U - Indicates compound analyzed for but not detected  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard  
 D - Indicates result is based on a dilution  
 P - Greater than 25% diff. between 2 GC columns.  
 MDL - Minimum detection limit  
 RL - Reporting limit

## Case Narrative

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street, Bronx, NY) on 12/23/2015 12:00:00 PM.

All analyses were performed within the required holding time.

In the BNA analyses, the laboratory control sample (LCS) for Batch B5L2403 recovered outside control limits for multiple analytes. These analytes were within house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5L2403 had compounds recovered outside acceptance criteria due to matrix interference. The LCS was within acceptance limits for affected compounds; therefore, no further action required.

In the Pesticide analyses, the laboratory control sample (LCS) for Batch B5L2402 recovered outside control limits for certain analytes. These analytes were within house limits; therefore, the data has been reported.

In the Pesticide analyses, the MS/MSD for Batch B5L2402 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was within acceptance limits for affected compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

Daniel Miguel  
Technical Director

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Percent Solids by SM 2540 G  
Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street, Bronx, NY

**Work Order:** 1502323

Received: 12/23/15 12:00

**Cooler**

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-18	1502323-01	Soil	12/23/2015 10:10	12/23/2015 12:00

### Data Qualifiers

- \* Values outside of QC limits
- ND - Indicates compound analyzed for but not detected
- U - Indicates compound analyzed for but not detected
- J - Indicates estimated value for TICs and all results when detected below the RL
- B - Indicates compound found in associated blank
- E - Concentration exceeds highest calibration standard
- D - Indicates result is based on a dilution
- P - Greater than 25% diff. between 2 GC columns.
- MDL - Minimum detection limit
- RL - Reporting limit

---

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

Toluene-d8	99%	70-130
Bromofluorobenzene	79%	70-130

\* Values outside of QC limits  
 ND - Indicates compound analyzed for but not detected  
 U - Indicates compound analyzed for but not detected  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard  
 D - Indicates result is based on a dilution  
 P - Greater than 25% diff. between 2 GC columns.  
 MDL - Minimum detection limit  
 RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

Spiked Amount	50.000	Range	70 - 130	Recovery	=	4.32%#
41) Toluene-d8	9.06	98	72517	2.24	ug/l	-0.01
Spiked Amount	50.000	Range	70 - 130	Recovery	=	4.48%#
47) Bromofluorobenzene	12.83	95	22308	2.32	ug/l	-0.01
Spiked Amount	50.000	Range	70 - 130	Recovery	=	4.64%#

Target Compounds

	R.T.	QIon	Response	Conc	Units	Qvalue
2) Acrolein	2.96	56	1651	12.43	ug/l	90
3) Acrylonitrile	4.40	53	19279	12.03	ug/l	99
4) Acetone	3.33	43	10788	6.88	ug/l	# 63
5) Dichlorodifluoromethane	1.34	85	14251	Below Cal		82
6) Chloromethane	1.51	50	41424	2.80	ug/l	89
7) Vinyl Chloride	1.57	62	42992	2.54	ug/l	88
8) Bromomethane	1.85	94	27337	2.38	ug/l	90
9) Chloroethane	1.95	64	40889	2.40	ug/l	94
10) Trichlorofluoromethane	2.08	101	32962	2.20	ug/l	84
11) Freon-113	2.62	101	30567	2.28	ug/l	92
12) 1,1-Dichloroethene	2.56	61	43317	2.19	ug/l	# 79
13) Carbon disulfide	2.56	76	67626	1.96	ug/l	# 21
14) Methyl Acetate	3.51	43	10154m	2.21	ug/l	
15) Methylene Chloride	3.23	49	97933	4.34	ug/l	100
16) trans-1,2-Dichloroethene	3.41	61	36727	2.28	ug/l	90
17) 1,1-Dichloroethane	4.27	63	44275	2.17	ug/l	95
18) Vinyl acetate	4.74	43	31090	2.24	ug/l	87
19) 2,2-Dichloropropane	5.19	77	29661	2.19	ug/l	86
20) 2-Butanone	5.99	43	7232	2.66	ug/l	92
21) cis-1,2-Dichloroethene	5.06	61	33137	2.28	ug/l	98
22) Chloroform	5.48	83	31941	2.28	ug/l	84
23) Bromochloromethane	5.34	130	11581	2.19	ug/l	92
24) Cyclohexane	5.28	56	59804	2.38	ug/l	87
25) 1,1,1-Trichloroethane	5.71	97	23097	2.13	ug/l	83
26) T-butyl alcohol	3.85	59	9772m	24.15	ug/l	
29) 1,1-Dichloropropene	5.90	110	11881	2.29	ug/l	# 74
30) Carbon Tetrachloride	5.60	117	20381	2.07	ug/l	85
31) 1,2-Dichloroethane	6.54	62	16009	2.20	ug/l	92
32) Benzene	6.25	78	94226	2.29	ug/l	95
33) Trichloroethene	7.07	95	20051	2.18	ug/l	90
34) Methylcyclohexane	7.02	83	45245	2.25	ug/l	93
35) 1,2-Dichloropropane	7.80	63	25552	2.41	ug/l	97
37) Bromodichloromethane	7.93	83	19018	2.21	ug/l	88
38) Dibromomethane	7.67	174	7362	1.92	ug/l	94
39) 2-Chloroethylvinylether	8.80	63	7234	1.73	ug/l	82
40) cis-1,3-dichloropropene	8.81	75	29942	2.27	ug/l	90
42) Toluene	9.13	91	91006	2.39	ug/l	92
43) trans-1,3-Dichloropropene	9.75	75	20574	2.16	ug/l	95
44) 1,1,2-Trichloroethane	9.96	97	12412	2.42	ug/l	# 73
45) 4-Methyl-2-pentanone	9.74	43	10826	2.03	ug/l	85
46) 1,2-Dibromoethane	10.48	107	10920	2.22	ug/l	94
49) 2-Hexanone	10.93	43	8221	2.22	ug/l	77
50) 1,3-dichloropropane	10.33	76	21755	2.21	ug/l	87
51) Tetrachloroethene	9.63	166	21559	2.23	ug/l	87

\* Values outside of QC limits  
 ND - Indicates compound analyzed for but not detected  
 U - Indicates compound analyzed for but not detected  
 J - Indicates estimated value for TICs and all results when detected below the RL  
 B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard  
 D - Indicates result is based on a dilution  
 P - Greater than 25% diff. between 2 GC columns.  
 MDL - Minimum detection limit  
 RL - Reporting limit

NA	Percent Solids	71.3	0.100	0.100	1		12/28/15 10:00	Percent Solids	12/28/15 13:59 CLD	SM 2540 G

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-18	1502323-01	Soil	12/23/2015 10:10	12/23/2015 12:00

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- E Concentration exceeds calibration range
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 E. 138th Street

**Work Order:** 1600232

Received: 2/10/16 13:00

### **Cooler**

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-20	1600232-01	Soil	02/10/2016 10:15	02/10/2016 13:00

### Data Qualifiers

- \* Values outside of QC limits
- ND - Indicates compound analyzed for but not detected
- U - Indicates compound analyzed for but not detected
- J - Indicates estimated value for TICs and all results when detected below the RL
- B - Indicates compound found in associated blank
- E - Concentration exceeds highest calibration standard
- D - Indicates result is based on a dilution
- P - Greater than 25% diff. between 2 GC columns.
- MDL - Minimum detection limit
- RL - Reporting limit

# PEST/PCB

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-22	1601418-01	Soil	07/28/2016 10:44	07/28/2016 15:25

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Indicates estimated value for TICs and all results when detected below the RL
- D Data reported from a dilution
- B Indicates compound found in associated blank
- ND Indicates compound analyzed for but not detected
- U Indicates compound analyzed for but not detected
- dry Sample results reported on a dry weight basis
- RL Reporting Limit
- MDL Method Detection Limit

### Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street

**Work Order:** 1601448

Received: 8/1/16 15:05

### Cooler

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

**Analytical Report for Samples**

<b>Sample ID</b>	<b>Laboratory ID</b>	<b>Matrix</b>	<b>Date Sampled</b>	<b>Date Received</b>
EP-23	1601448-01	Soil	08/01/2016 11:40	08/01/2016 15:05

**Data Qualifiers**

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

# PEST/PCB

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-25	1601635-01	Soil	08/24/2016 10:40	08/24/2016 14:05

### Data Qualifiers

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

# PEST/PCB

Technical Director

09/12/2016

New Jersey Certification Number: 12007  
New York Certification Number: 11109  
Pennsylvania Certification Number: 68-02799

This report shall not be reproduced, except in its entirety, without the written consent of Accredited Analytical Resources, LLC.  
The test results included in this report relate only to the samples analyzed.

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street

**Work Order:** 1601701

Received: 9/7/16 14:15

**Cooler**

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-27	1601701-01	Soil	09/06/2016 12:47	09/07/2016 14:15

### Data Qualifiers

- \* Values outside of QC limits
- ND - Indicates compound analyzed for but not detected
- U - Indicates compound analyzed for but not detected
- J - Indicates estimated value for TICs and all results when detected below the RL
- B - Indicates compound found in associated blank
- E - Concentration exceeds highest calibration standard
- D - Indicates result is based on a dilution
- P - Greater than 25% diff. between 2 GC columns.
- MDL - Minimum detection limit
- RL - Reporting limit

# PEST/PCB

Project: 255 E. 138th Street  
Project Manager: Sean Harrison

**Reported:**  
09/16/2016 14:55

## Condition of Samples on Receipt

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

Dear Bernie,

Yes, I would like to revise the TAT to be 72 hours for these samples.

Thanks you,

Monica

Hi Monica,

We received 2 soil samples today for the 255 E. 138th Street Project.

Per our conversation today, please confirm that you would like to revise the TAT to 72 hours.

Thank you,

Bernie O'Gara

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-31	1601783-01	Soil	09/16/2016 10:20	09/16/2016 14:10

### Data Qualifiers

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

# PEST/PCB

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street

**Work Order:** 1602114

Received: 11/7/16 14:15

**Cooler**

Temperature °C	6.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

### Analytical Report for Samples

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
EP-32	1602114-01	Soil	11/07/2016 12:30	11/07/2016 14:15
EP-33	1602114-02	Soil	11/07/2016 12:15	11/07/2016 14:15
DUP-1	1602114-03	Soil	11/07/2016 12:20	11/07/2016 14:15

### Data Qualifiers

- \* Values outside of QC limits
- ND - Indicates compound analyzed for but not detected
- U - Indicates compound analyzed for but not detected
- J - Indicates estimated value for TICs and all results when detected below the RL
- B - Indicates compound found in associated blank
- E - Concentration exceeds highest calibration standard
- D - Indicates result is based on a dilution
- P - Greater than 25% diff. between 2 GC columns.
- MDL - Minimum detection limit
- RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

## Methodology Summary

**EPA Method SW846 8081/8082:**

NJ 8081A/8082  
NY 8081B/8082A

**Semivolatile Organic Compounds EPA Method SW846 8270:**

NJ 8270C  
NY 8270D

**Total Mercury by SW846 7471:**

NJ EPA 7471A  
NY EPA 7471B

**Total Metals by EPA Method SW846 6010:**

NJ 6010B  
NY 6010C

**Volatile Organic Compounds EPA Method SW846 8260:**

NJ 8260B  
NY 8260C

**Wet Chemistry:**

Hexavalent Chromium by 3060A/7196A  
Total Cyanide by EPA 9010C & EPA 9014  
Percent Solids by SM 2540 G

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street

**Work Order:** 1602245

Received: 12/2/16 16:45

**Cooler**

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

**Accredited Analytical Resources, LLC.**

### Data Qualifiers

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

# PEST/PCB

<u>Surrogate</u>	<u>% Recovery</u>	<u>Recovery Limits</u>
Tetrachloro-m-xylene	61.7%	30-150
Tetrachloro-m-xylene [2C]	69.5%	30-150
Decachlorobiphenyl	67.0%	30-150
Decachlorobiphenyl [2C]	92.0%	30-150

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 5 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 138th Street, Bronx, NY; 10BR188) on 10/20/2015 3:15:00 PM.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J2622 and B5J2718 recovered outside control limits for certain analytes. These analytes were recovered outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the Volatile Organic analyses, the MS/MSD for Batch B5J2622 and B5J2718 had compounds recovered outside acceptance criteria due to matrix interference, the LCS's were recovered within acceptance limits; therefore, no further action required.

In the Volatile Organic analyses, the methylene chloride result reported for all samples is due to laboratory contamination.

In the BNA analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J2601 recovered outside control limits for certain analytes. These analytes were recovered outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5J2601 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Pesticide/PCB analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J2301 recovered outside control limits for certain analytes. These analytes were recovered outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the Pesticide/PCB analyses, the MS/MSD for Batch B5J2301 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Metals analysis, the MDL/RL for Selenium exceeds the NYDEC Unrestricted Soil Cleanup Criteria for AAR Sample #1501878-01 and -05 due to the high moisture content of the sample (% Solid: 44.6% AAR Sample #1501878-01 and 22.8% AAR Sample #1501878-05).

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

**Subject:** Chain of Custody Revision - 255 E. 138th Street - 10BR188

Bernie,

For the COC that was submitted yesterday, October 20<sup>th</sup>, 2015 for the project located at 255 East 138<sup>th</sup> Street, Bronx, NY (Name: 10BR188), please change the sample time for each EP sample to be the second time (i.e. EP-1 sampled at 11:30, EP-2 sampled at 11:35, EP-3 sampled at 11:40, etc...).

Please let me know if you have any other questions.

Thanks!

Monica

## Case Narrative

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 3 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 138th Street, Bronx, NY; 10BR188) on 10/23/2015 2:30:00 PM.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J2622 and B5J2718 recovered outside control limits for certain analytes. These analytes were outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the Volatile Organic analyses, the MS/MSD for Batch B5J2622 and B5J2718 had compounds recovered outside acceptance criteria due to matrix interference, the LCS's were recovered within acceptance limits; therefore, no further action required.

In the Volatile Organic analyses, one surrogate (Bromofluorobenzene) for AAR Sample #1501909-01 was out of criteria. The sample was reanalyzed and the surrogate was again recovered out of the required criteria. The methylene chloride result reported for all samples is due to laboratory contamination.

In the BNA analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J2601 recovered outside control limits for certain analytes. These analytes were outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5J2601 had compounds recovered outside acceptance limits due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Metals analysis, the MDL/RL for Selenium exceeds the NYDEC Unrestricted Soil Cleanup Criteria for AAR Sample #1501909-01 and -03 due to the high moisture content of the sample (% Solid: 48% AAR Sample #1501909-01 and 47% AAR Sample #1501909-03).

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike concentration. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

## Case Narrative

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 138th Street, Bronx, NY; 10BR188) on 10/27/2015 2:15:00 PM.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B5K0314-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Volatile Organic analyses, the methylene chloride result reported is due to laboratory contamination.

In the BNA analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J3001 recovered outside control limits for certain analytes. These analytes were outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5J3001 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

Daniel Miguel  
Technical Director

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 138th Street, Bronx, NY; 10BR188) on 10/29/2015 3:40:00 PM.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B5K0314-MS1/MSD1 and B5K0509-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS's were recovered within acceptance limits for all compounds; therefore, no further action required.

In the Volatile Organic analyses, the methylene chloride result reported is due to laboratory contamination.

In the BNA analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5J3001 recovered outside control limits for certain analytes. These analytes were outside DKQP limits, but within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5J3001 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Metals analysis, the MDL/RL for Selenium exceeds the NYDEC Unrestricted Soil Cleanup Criteria for AAR Sample #1501955-01 due to the high moisture content of the sample (% Solid: 50%).

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 3 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 138th Street, Bronx, NY; 10BR188) on 11/10/2015 2:15:00 PM.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B5K1614-MS1/MSD1 and B5K1710-MS1/MSD1 had compounds recovered outside acceptance limits due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Volatile Organic analyses, one surrogate (Bromofluorobenzene) for AAR Sample #1502031-02 was out of criteria. The sample was reanalyzed and the surrogate was again recovered out of the required criteria. The methylene chloride result reported for AAR Sample #1502031-01 is due to matrix interference.

In the BNA analyses, the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for Batch B5K1301 recovered outside control limits for certain analytes. These analytes were within house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B5K1301 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

Daniel Miguel  
Technical Director

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, one surrogate (1,2-Dichloroethane-d4) was out of criteria. The sample was reanalyzed and the surrogate was again recovered out of the required criteria.

In the BNA analyses, the laboratory control sample (LCS) for Batch B6G2215 recovered outside control limits for certain analytes. These analytes were within house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B6G2215 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for affected compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria due to matrix interference. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

Daniel Miguel  
Technical Director

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138 Street) on 07/28/2016 15:25.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, the methylene chloride result reported is due to laboratory contamination.

In the Volatile Organic analyses, B6H0217-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the BNA analyses, the laboratory control sample (LCS) for Batch B6H0203 recovered outside control limits for multiple analytes. These analytes were recovered within house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B6H0203 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for affected compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street) on 08/31/2016 14:20.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B6I0210-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the BNA analyses, B6I0103-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Pesticide analyses, B6I0601-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street) on 09/07/2016 14:15.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B6I0815-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the BNA analyses, the laboratory control sample (LCS) for Batch B6I0901 recovered outside control limits for multiple analytes. These analytes were recovered within house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B6I0901 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for affected compounds; therefore, no further action required.

In the Pesticide analyses, B6I0902-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street) on 09/16/2016 14:10.

On 11/15/16, per client request, Selenium reported down to MDL in order to meet NYDEC limits. The results are attached.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, B6I2013-MS1/MSD1 and B6I2307-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS's were recovered within acceptance limits for all compounds; therefore, no further action required.

In the BNA analyses, three surrogates (2-Fluorophenol, Phenol-d5 and 2,4,6-Tribromophenol) were out of criteria. The sample was diluted and analyzed and the surrogates were again recovered out of the required criteria.

In the BNA analyses, the laboratory control sample (LCS) for Batch B6I2101 recovered outside control limits for multiple analytes. These analytes were recovered within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B6I2101 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for affected compounds; therefore, no further action required.

In the Pesticide analyses, B6I1902-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria. The QC sample had concentrations too high to be able to determine a spike recovery. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

### Conformance / Non-Conformance Summary

AAR Work Order: **1602114**

Accredited Analytical Resources, LLC received 3 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street) on 11/07/2016 14:15.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, the MDL level was elevated for AAR Sample #1602114-03 due to matrix interference.

In the Volatile Organic analyses, B6K1113-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the BNA analyses, the laboratory control sample (LCS) for Batch B6K0901 recovered outside control limits for certain analytes. These analytes were recovered within the house limits; therefore, the data has been reported.

In the BNA analyses, the MS/MSD for Batch B6K0901 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for affected compounds; therefore, no further action required.

In the Pesticide analyses, B6K0902-MS1/MSD1 had compounds recovered outside acceptance criteria due to matrix interference, the LCS was recovered within acceptance limits for all compounds; therefore, no further action required.

In the Metals analysis, the MDL/RL for Selenium exceeds the NYDEC Unrestricted Soil Cleanup Criteria for AAR Sample #1602114-01 due to the high moisture content of the sample (% Solid: 27%).

In the Metals analysis the recoveries of the MS/MSD were outside of acceptance criteria due to matrix interference. The LCS was within acceptance criteria for those metals out in the MS/MSD. The results are included in this data package.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses."

Daniel Miguel  
Technical Director

## Condition of Samples on Receipt

**Client:** BRINKERHOFF ENVIRONMENTAL

**Project:** 255 East 138th Street

**Work Order:** 1602245

Received: 12/2/16 16:45

**Cooler**

Temperature °C	4.00
Chain of Custody Filled Out Properly	Yes
Proper Containers and Volumes	Yes
Received Within Holding Time	Yes
Samples Received with Correct Preservation	Yes
Samples Received On Ice	Yes
Sample Received Via Field Services	No
Samples Hand Delivered	Yes

**Accredited Analytical Resources, LLC.**

### Data Qualifiers

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

# PEST/PCB

<u>Surrogate</u>	<u>% Recovery</u>	<u>Recovery Limits</u>
1,2-Dichloroethane-d4	110%	70-130
Toluene-d8	100%	70-130
Bromofluorobenzene	94%	70-130

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

## Case Narrative

### Conformance / Non-Conformance Summary

Accredited Analytical Resources, LLC received 1 sample(s) from BRINKERHOFF ENVIRONMENTAL (Project: 255 East 138th Street) on 8/20/2015 1:15:00 PM.

All analyses were performed within the required holding time.

In the Volatile Organic analyses, the MDL level was elevated due to matrix interference. The methylene chloride result reported is due to laboratory contamination.

Except for the parameters tested AAR makes no representation as to the fitness or quality of the sample (s) taken.

"The laboratory has reviewed the quality assurance and quality control measurements for the sample analyses.

Daniel Miguel  
Technical Director

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

---

\* Values outside of QC limits

ND - Indicates compound analyzed for but not detected

U - Indicates compound analyzed for but not detected

J - Indicates estimated value for TICs and all results when detected below the RL

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns.

MDL - Minimum detection limit

RL - Reporting limit

## APPENDIX VI

---

## EXCAVATION WORK PLAN (EWP)

Contaminated soil remains in the Track 4 and Track 2 Remedial Areas under the Site building. Therefore, to the extent any future excavation will impact these areas of the site, this EWP will apply.

### [VI]-1 NOTIFICATION

At least 15 days prior to the start of any activity that is anticipated to encounter remaining contamination, the site owner or their representative will notify the New York State Department of Environmental Conservation (NYSDEC). The table below includes contact information for the above notification. The information on this table will be updated as necessary to provide accurate contact information. A full listing of site-related contact information is provided in **Appendix II** of the Site Management Plan.

**Notifications\* Table**

<b>Name</b>	<b>Contact Information</b>
Bryan Wong	yukyin.wong@dec.ny.gov
Jane O'Connell	jane.oconnell@dec.ny.gov
Kelly Lewandowski	kelly.lewandowski@dec.ny.gov

\* Note: Notifications are subject to change and will be updated as necessary.

This notification will include:

- A detailed description of the work to be performed, including the location and areal extent of excavation, plans/drawings for site re-grading, intrusive elements or utilities to be installed below the soil cover, estimated volumes of contaminated soil to be excavated and any work that may impact an engineering control;
- A summary of environmental conditions anticipated to be encountered in the work areas, including the nature and concentration levels of contaminants of concern, potential presence of grossly contaminated media, and plans for any pre-construction sampling;

- A schedule for the work, detailing the start and completion of all intrusive work;
- A summary of the applicable components of this EWP;
- A statement that the work will be performed in compliance with this EWP and 29 CFR 1910.120;
- A copy of the health and safety plan (HASP), in electronic format, is provided in **Appendix VII** of this Site Management Plan (SMP);
- Identification of disposal facilities for potential waste streams; and
- Identification of sources of any anticipated backfill, along with all required chemical testing results.

#### **[VI]-2 SOIL SCREENING METHODS**

Visual, olfactory and instrument-based (e.g. photoionization detector) soil screening will be performed by a qualified environmental professional during all excavations into known or potentially contaminated material (remaining contamination). Soil screening will be performed when invasive work is done and will include all excavation and invasive work performed during development, such as excavations for foundations and utility work, after issuance of the Certificate of Completion.

Soils will be segregated based on previous environmental data and screening results into material that requires off-site disposal and material that requires testing to determine if the material can be reused on-site as soil beneath a cover or if the material can be used as cover soil. Further discussion of off-site disposal of materials and on-site reuse is provided in Section 4 of this Appendix.

#### **[VI]-3 SOIL STAGING METHODS**

Soil stockpiles will be continuously encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface waters and other discharge points. Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. All

undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials. Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters. Silt fencing or hay bales will be installed around the entire perimeter of the remedial construction area.

Excavated soil from suspected areas of contamination (e.g., hot spots, USTs, drains, etc.) will be stockpiled separately and will be segregated from clean soil and construction materials. Stockpiles will be used only when necessary and will be removed as soon as practicable. Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the site and available for inspection by the NYSDEC.

#### **[VI]-4 MATERIALS EXCAVATION AND LOAD-OUT**

A qualified environmental professional or person under their supervision will oversee all invasive work and the excavation and load-out of all excavated material.

The owner of the property and remedial party (if applicable) and its contractors are responsible for safe execution of all invasive and other work performed under this Plan.

The presence of utilities and easements on the site will be investigated by the qualified environmental professional. It will be determined whether a risk or impediment to the planned work under this SMP is posed by utilities or easements on the site.

Loaded vehicles leaving the site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and New York State Department of Transportation (NYSDOT) requirements (and all other applicable transportation requirements).

A truck wash will be operated on-site, as appropriate. The qualified environmental professional will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the site until the activities performed under this section are complete. Truck wash waters will be collected and disposed of off-site in an appropriate manner.

Locations where vehicles enter or exit the site shall be inspected daily for evidence of off-site soil tracking.

The qualified environmental professional will be responsible for ensuring that all egress points for truck and equipment transport from the site are clean of dirt and other materials derived from the site during intrusive excavation activities. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to site-derived materials.

#### **[VI]-5 MATERIALS TRANSPORT OFF-SITE**

All transport of materials will be performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Material transported by trucks exiting the site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

Truck transport routes are as follows: head northwest on E. 138<sup>th</sup> Street toward Rider Ave, turn right onto Gerard Ave, take the I-87 N/Major Deegan Expressway ramp on the left to Albany, merge onto I-87, take exit 7S and merge onto I-95 South towards the George Washington Bridge to New Jersey. All trucks loaded with site materials will exit the vicinity of the site using only these approved truck routes. This is the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; (f) overall safety in transport; and (g) community input.

Trucks will be prohibited from stopping and idling in the neighborhood outside the project site. Egress points for truck and equipment transport from the site will be kept clean of dirt and other materials during site remediation and development. Queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

#### **[VI]-6 MATERIALS DISPOSAL OFF-SITE**

All material excavated and removed from the Track 4 and under the Track 2 areas on the site will be treated as contaminated and regulated material and will be transported and disposed

in accordance with all local, State (including 6NYCRR Part 360) and Federal regulations. If disposal of material from this site is proposed for unregulated off-site disposal (i.e. clean soil removed for development purposes), a formal request with an associated plan will be made to the NYSDEC. Unregulated off-site management of materials from this site will not occur without formal NYSDEC approval.

Off-site disposal locations for excavated soils will be identified in the pre-excavation notification. This will include estimated quantities and a breakdown by class of disposal facility if appropriate, i.e. hazardous waste disposal facility, solid waste landfill, petroleum treatment facility, C/D recycling facility, etc. Actual disposal quantities and associated documentation will be reported to the NYSDEC in the Periodic Review Report. This documentation will include: waste profiles, test results, facility acceptance letters, manifests, bills of lading and facility receipts.

Non-hazardous historic fill and contaminated soils taken off-site will be handled, at minimum, as a Municipal Solid Waste per 6NYCRR Part 360-1.2. Material that does not meet Unrestricted SCOs is prohibited from being taken to a New York State recycling facility (6NYCRR Part 360-16 Registration Facility).

#### **[VI]-7 MATERIALS REUSE ON-SITE**

Soil originating from the site may be reused on the site if sampling of the soil demonstrates compliance with the NYSDEC Restricted-Residential Use (Track 2) Soil Cleanup Objectives (SCOs).

The qualified environmental professional will ensure that procedures defined for materials reuse in this SMP are followed and that unacceptable material does not remain on-site. Contaminated on-site material, including historic fill and contaminated soil, that is acceptable for reuse on-site will be placed below the demarcation layer or impervious surface, and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines.

Any demolition material proposed for reuse on-site will be sampled for asbestos and the results will be reported to the NYSDEC for acceptance. Concrete crushing or processing on-site will not be performed without prior NYSDEC approval. Organic matter (wood, roots, stumps,

etc.) or other solid waste derived from clearing and grubbing of the site will not be reused on-site.

#### **[VI]-8 FLUIDS MANAGEMENT**

All liquids to be removed from the site, including but not limited to, excavation dewatering, decontamination waters and groundwater monitoring well purge and development waters, will be handled, transported and disposed in accordance with applicable local, State, and Federal regulations. Liquids discharged into the New York City sewer system will receive prior approval by the New York City Department of Environmental Protection (NYCDEP). The NYCDEP regulates discharges to the New York City sewers under Title 15, Rules of the City of New York, Chapter 19. Discharge to the New York City sewer system will require an authorization and sampling data demonstrating that the groundwater meets the City's discharge criteria. The dewatering fluid will be pretreated as necessary to meet the NYCDEP discharge criteria. If discharge to the City sewer system is not appropriate, the dewatering fluids will be managed by transportation and disposal at an off-Site treatment facility. Dewatering, purge and development fluids will not be recharged back to the land surface or subsurface of the site, and will be managed off-site, unless prior approval is obtained from NYSDEC.

Discharge of water generated during large-scale construction activities to surface waters (i.e. a local pond, stream or river) will be performed under a SPDES permit.

#### **[VI]-9 COVER SYSTEM RESTORATION**

After the completion of soil removal and any other invasive activities in the Track 1, 2, and 4 Areas, the cover system will be restored in a manner that complies with the RAWP and Decision Document. The existing Track 4 Remedial Area cover system is comprised of at a minimum, a four (4) to six (6)-inch concrete slab and an approximate one (1) to two (2)-foot layer of recycled concrete aggregate (RCA) and/or virgin quarry stone. As part of development, the Track 4 Remedial Area cover system overlies the second engineering control that serves the Track 4 and Track 2 Areas of the Site, the vapor barrier membrane. The demarcation layer, consisting of the Preprufe 300R waterproofing/vapor barrier membrane will be replaced to provide a visual reference to the top of the remaining contamination zone, the zone that requires adherence to special conditions for disturbance of remaining contaminated soils defined in this

SMP. If the type of cover system changes from that which exists prior to the excavation (i.e., a soil cover is replaced by asphalt), this will constitute a modification of the cover element of the remedy and the upper surface of the remaining contamination. A figure showing the modified surface will be included in the subsequent Periodic Review Report and in an updated SMP.

#### **[VI]-10 BACKFILL FROM OFF-SITE SOURCES**

All materials proposed for import onto the site will be approved by the qualified environmental professional and will be in compliance with provisions in this SMP prior to receipt at the site. A Request to Import/Reuse Fill or Soil form, which can be found at <http://www.dec.ny.gov/regulations/67386.html>, will be prepared and submitted to the NYSDEC project manager allowing a minimum of 5 business days for review.

Material from industrial sites, spill sites, or other environmental remediation sites or potentially contaminated sites will not be imported to the site.

All imported soils will meet the backfill and cover soil quality standards established in 6NYCRR 375-6.7(d). Based on an evaluation of the land use, protection of groundwater and protection of ecological resources criteria, the resulting soil quality standards are listed in Table 375-6.8(b). Soils that meet 'exempt' fill requirements under 6 NYCRR Part 360, but do not meet backfill or cover soil objectives for this site, will not be imported onto the site without prior approval by NYSDEC. Solid waste will not be imported onto the site.

Trucks entering the site with imported soils will be securely covered with tight fitting covers. Imported soils will be stockpiled separately from excavated materials and covered to prevent dust releases.

#### **[VI]-11 STORMWATER POLLUTION PREVENTION**

Barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the site and available for inspection by the NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional.

All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the SMP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

Silt fencing or hay bales will be installed around the entire perimeter of the construction area.

#### **[VI]-12 EXCAVATION CONTINGENCY PLAN**

If underground tanks or other previously unidentified contaminant sources are found during post-remedial subsurface excavations or development related construction, excavation activities will be suspended until sufficient equipment is mobilized to address the condition.

Sampling will be performed on product, sediment and surrounding soils, etc. as necessary to determine the nature of the material and proper disposal method. Chemical analysis will be performed for a full list of analytes (TAL metals; TCL volatiles and semi-volatiles, TCL pesticides and PCBs), unless the site history and previous sampling results provide a sufficient justification to limit the list of analytes. In this case, a reduced list of analytes will be proposed to the NYSDEC for approval prior to sampling.

Identification of unknown or unexpected contaminated media identified by screening during invasive site work will be promptly communicated by phone to NYSDEC's Project Manager. Reportable quantities of petroleum product will also be reported to the NYSDEC spills hotline. These findings will be also included in the Periodic Review Report.

#### **[VI]-13 OTHER NUISANCES**

##### ***Odor Control***

All necessary means will be employed to prevent on- and off-Site odor nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and, (c) use of foams to cover exposed odorous soils. If odors develop and cannot otherwise be controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-Site disposal; and, (e) use of chemical

odorants in spray or misting systems.

This odor control plan is capable of controlling emissions of nuisance odors. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. NYSDEC will be notified of all odor complaint events. Implementation of all odor controls, including halt of work, will be the responsibility of the PE/QEP certifying the FER.

### ***Dust Control***

Dust management during invasive on-Site work will include, at a minimum:

- Use of a dedicated water spray methodology for roads, excavation areas, and stockpiles;
- Use of properly anchored tarps to cover stockpiles;
- Exercise of extra care during dry and high-wind periods; and,
- Use of gravel or RCA on egress and other roadways to provide a clean and dust-free road surface.

This dust control plan is capable of controlling dust generation. If nuisance dust emissions are identified, work will be halted and the source of dusts will be identified and corrected. Work will not resume until all nuisance dust emissions have been abated. NYSDEC will be notified of all dust complaint events. Implementation of all dust controls, including halt of work, will be the responsibility of the PE/QEP responsible for certifying the FER.

### ***Other Nuisance Controls***

A plan for rodent control will be developed and utilized by the contractor prior to and during site clearing and site grubbing, and during all remedial work.

A plan will be developed and utilized by the contractor for all remedial work to ensure compliance with local noise control ordinances.

## **APPENDIX VII**

---

## **SITE-SPECIFIC HEALTH AND SAFETY PLAN**

**255 East 138<sup>th</sup> Street  
Bronx, New York**

### **1.0 INTRODUCTION**

This Site-Specific Health and Safety Plan (HASP) was prepared in accordance with the requirements and guidelines of the applicable Occupational Safety and Health Administration (OSHA) requirements in 29 Code of Federal Regulations (CFR) Part 1910.120. This HASP has been prepared for the property at 255 East 138<sup>th</sup> Street, Bronx, New York. The HASP will be available for inspection and review by site workers and regulatory personnel during work activities involving the installation of monitoring wells, soil vapor sampling and structural support work related to retaining wall repair. Site workers are required to comply with this HASP when conducting the site activities listed in Section 2.0. Site workers will notify the Site Safety Officer of matters regarding health, safety, and security.

All personnel and subcontractors must familiarize themselves with material contained herein, including special conditions and facilities located near each project as listed on the following pages. The information contained in this HASP pertains to the installation of soil borings and the collection of soil and groundwater samples for laboratory analysis.

### **2.0 ENTRY OBJECTIVES**

The objective of entry to the Work Area is to conduct support of excavation operations, conduct dewatering, excavation, and transportation of contaminated soil to an off-site disposal facility, and conduct environmental monitoring, oversight and sampling. Soil has been documented to be impacted by contaminants associated with urban historic fill and petroleum-related compounds associated with the former use of the site as gasoline service stations. Work performed at the site will be done in accordance with 29 CFR 1926, Subpart P, and all other appropriate federal and state regulations.

### **3.0 ON-SITE ORGANIZATION AND COORDINATION**

Key project personnel and their responsibilities to carry out the stated job function at the site are discussed below.

Brinkerhoff Environmental Services, Inc. (Brinkerhoff) will provide health and safety support associated with environmental issues. The contact information for the designated person to provide Health and Safety support for this project is:

Sean Harrison, Project Manager  
Brinkerhoff Environmental Services, Inc.  
1805 Atlantic Avenue  
Manasquan, New Jersey 08736  
Phone: (732) 223-2225 Fax: (732) 223-3666

The contact information for the Construction Health and Safety Officer for overall administration of this HASP during installation of piles and footings is outlined below. The Construction Health and Safety Officer's responsibilities will include overall project safety and health monitoring for the work to be performed. The Construction Health and Safety Officer will enforce and audit the effectiveness of the HASP on a continuing basis and make changes to ensure that the intent of the HASP is maintained. The Construction Health and Safety Officer will be determined prior to beginning construction operations at the site.

Roger Pine  
East 138<sup>th</sup> Street, LLC  
334-336 East 110<sup>th</sup> Street, New York, NY 10029  
Office: 212-966-6640

#### **4.0 ON-SITE CONTROL**

##### ***Excavating Precautions (Utilities)***

1. A utility markout of all underground utilities will be completed prior to the inception of ground-intrusive work, in compliance with 29 CFR 1926.651. The utility markout will utilize the One Call system prior to the commencement of operations at the site. Work will commence less than 10 business days after contacting the One Call system.
2. Visually inspect all utility markout locations on site.
3. Operations in the vicinity of overhead power lines will be conducted in accordance with 29 CFR 1910.333 (c)(3).
4. Conduct all excavations and subsequent soil sampling in the vicinity of a utility with caution.
5. If a utility line is damaged, call the utility company immediately.

##### ***Dust Prevention and Control (Track out onto Paved Public Roadways)***

1. Vehicles leaving the site should be cleaned/decontaminated prior to exiting.
2. Promptly remove mud, dirt, or similar debris from the paved road.
3. Water flush and/or vacuum sweep the paved road.
4. Prepare unpaved site ingress and egress points by applying gravel to the surface to control track out and erosion.
5. The surface of the ingress and egress points must be kept adequately wet with water.

##### ***Dust Prevention and Control (General Procedures for Unpaved Areas)***

1. Apply gravel to entrance, exit, and other areas of the site that are likely to see heavy vehicular traffic.
2. Limit vehicle traffic to required vehicles.
3. Limit vehicle speeds on unpaved areas of the site. Placement of signs near the site entrance that denote site speed restrictions is advised.
4. Apply sufficient water to unpaved surfaces that are likely to be disturbed to keep them adequately wet. According to 40 CFR Part 61, adequately wet means sufficiently mixed or penetrated with liquid to prevent the release of particulates. Visibly detectable dust emissions are the primary indication that the unpaved work area has not been kept adequately wet.

### ***Dust Prevention and Control (Procedures for Grading and Excavation)***

1. When soil is to be moved or stockpiled, the drop height of the soil should be reduced as much as possible.
2. Limit the height of soil stockpiles.
3. Limit the disturbance of soil stockpiles.
4. Keep the surface of stockpiles adequately wet.
5. All stockpiled soil shall be covered with plastic sheeting or other suitable cover material.
6. RECORD AND MONITOR ALL DUST PREVENTION/CONTROL ACTIVITIES. Recording this information will provide a superior method of monitoring and evaluating the success of the dust prevention and control plan.

In the event that visible dust is observed, associated work activities are to stop immediately and measures to mitigate will commence as soon as possible (i.e., wetting down material with water).

## **5.0 HAZARD EVALUATION**

### **5.1 Environmental Hazards**

At present, suspected contaminants in the subsurface soil constitute an environmental hazard. Various chemical compounds have been identified in the soil at low concentrations. If encountered in the soil at higher concentrations than anticipated, exposure concerns could become a health issue. The following are known or suspected to be present at the site.

#### **5.1.1 Volatile Organic Compounds (VOCs)**

Volatile organic compounds (VOCs) such as benzene, toluene, ethylbenzene, xylenes (BTEX) and tetrachloroethene (PCE) have been identified in the soil vapor samples at the site. BTEX compounds were also detected in the groundwater beneath the site. Although soil sampling did not identify these compounds at elevated concentrations, should VOCs be detected during excavation, monitoring of the air using a photoionization detector (PID) will be performed. VOCs may cause chronic liver and kidney damage, and some are suspected human carcinogens. Benzene is a suspected human carcinogen. Acute exposure may include headache, dizziness, nausea, and skin and eye irritation. The primary route of exposure to VOCs is through inhalation; therefore, air monitoring and respiratory protection are the primary controls against exposure to VOCs.

#### **5.1.2 Urban Historic Fill Compounds**

Urban historic fill has been identified on the property. The urban historic fill is impacted with polynuclear aromatic hydrocarbons (PAHs) and metals. PAHs, arsenic, mercury, copper, lead, nickel, and zinc were detected over the New York State Department of Conservation's (NYSDEC's) Subpart 375-6 Track 2 Remedial Cleanup Objectives (RCO) in soil samples collected from the site.

## 5.2 Physical Hazards

The work to be completed at the site in conjunction with this HASP consists of installation of wells, piles, and excavation for the installation of footings. Additional physical hazards expected on site include buried utilities, slip, trip, and fall hazards, and hazards associated with heavy machinery.

## 6.0 HAZARD MONITORING

### 6.1 Air Monitoring Using a PID

Air monitoring and visual inspection of soil during excavation will be conducted. A PID will be used to screen both the soil and ambient air for the presence of VOCs.

The following are the Short Term (ST) Exposure Limits on a 15-minute time weighted average and the Immediate Danger to Life and Health (IDLH) conditions for VOCs which may be present in the subsurface soil. The levels are presented in parts per million (ppm).

<b>Compound</b>	<b>ST</b>	<b>IDLH</b>
Benzene	5 ppm	500 ppm
Ethyl benzene	100 ppm	500 ppm
Toluene	150 ppm	500 ppm
Xylenes	150 ppm	900 ppm

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds five (5) ppm above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below five (5) ppm over background, work activities will resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of five (5) ppm over background, but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less (but in no case less than 20 feet), is below five (5) ppm over background for the 15-minute average.
- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shut down.

All 15-minute readings will be recorded and be available for review. Instantaneous readings, if any, used for decision purposes will also be recorded.

### 6.2 Air Monitoring Using a Dust Trak Monitor

Particulate concentrations will be monitored both in the upwind and downwind directions at temporary particulate monitoring stations. The particulate monitoring will be performed using

real-time monitoring equipment such as the Dust Trak Aerosol Monitor, Model 8530, capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m<sup>3</sup>) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m<sup>3</sup> above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m<sup>3</sup> above the upwind level, work will be stopped and a reevaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m<sup>3</sup> of the upwind level and in preventing visible dust migration.

All readings will be recorded and be available for review.

### 6.3 Personal Protective Equipment (PPE)

Based upon evaluation of potential hazards, the following levels of personal protection have been designated for the Work Area:

Location	Job Function	Level of Protection			
Entire Site	Soil/Groundwater sampling	A	B	C	D

If VOCs are detected which indicate a need to upgrade the PPE, the Health and Safety Officer will stop all work and evaluate the level of protection required to complete the project. A determination will be made regarding the safety of the situation and the type of PPE that will be required. *At no time will work be conducted in an environment where an IDLH condition could be present.*

The following is the monitoring level for which a change in the level of protection or evacuation of the work area would be implemented. If the work area is evacuated, procedures such as the use of ventilation would be utilized if possible to lower monitoring levels to below the threshold for raising the level of protection.

PID                      150 ppm

*It should be noted that the work proposed will not be performed in a level of PPE other than Level D. Procedures would have to be put in place to lower the PPE requirement to Level D, should conditions suggest an increase in the level of PPE required.*

Precautions will be implemented to limit direct contact with the soil or inhalation of dust. At a minimum, nitrile gloves are to be worn when handling soil, dust control procedures used if necessary, and thorough hand washing prior to handling food.

Specific protective equipment for potential levels of protection is as follows:

### **6.3.1 Levels A & B**

Since levels A & B are for IDLH environments, they are not applicable to this project.

### **6.3.2 Level C**

The concentration(s) and type(s) of airborne substance(s) is (are) known and the criteria for using air-purifying respirators are met. The following constitute Level C equipment:

- National Institute for Occupational Safety and Health (NIOSH)-approved full-face or half-face air purifying respirators;
- Chemical-resistant clothing (overalls, chemical-splash suit, disposable chemical-resistant overalls);
- Gloves, outer and inner, chemical-resistant;
- Boots, outer, chemical-resistant, with steel toe and shank;
- Optional chemical resistant boot covers;
- Hard hat;
- Safety glasses with side shields;
- Face shield and safety glasses when not wearing a full face respirator; and,
- Hearing protection when working in noise hazardous areas or near operating heavy equipment.

### **6.3.3 Level D**

A work uniform providing no respiratory protection is used only for prevention of skin contamination. The following constitute Level D equipment:

- Coveralls or other skin-protective clothing (long-sleeve shirts and long pants);
- Gloves;
- Boots or shoes, chemical-resistant, steel toe and shank;
- Optional chemical resistant boot covers;
- Safety glasses or chemical splash goggles;
- Hard hat;
- Hearing protection when working in noise-hazardous areas or near operating heavy equipment; and,
- High-visibility safety vest.

***NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE WITHOUT THE APPROVAL OF THE CONSTRUCTION SITE SAFETY OFFICER.***

## 7.0 COMMUNICATION PROCEDURES

The following standard hand signals will be used in case of emergency:

<u>Message</u>	<u>Interpretation(s)</u>
Hands gripping throat .....	Out of air; can't breathe.
Grip partner's wrist.....	Leave area immediately.
Hands on top of head .....	Need assistance.
Thumbs up .....	OK; I am all right; I understand.
Thumbs down.....	No; Negative.

## 8.0 DECONTAMINATION PROCEDURES

Should hazardous materials be encountered, a decontamination procedure will be implemented. Generated waste, such as disposable PPE, will be disposed of in accordance with applicable local, state, and federal regulations. The decontamination protocol shall be used with the following decontamination stations:

- (1) Equipment drop;
- (2) Detergent and water rinse (optional); and,
- (3) Remove PPE (if utilized) and place in waste container.

Decontamination of equipment is not anticipated to be required for this project.

## 9.0 MEDICAL MONITORING

As per 29 CFR 1910.120 (b)(4)(ii)(D) and in accordance with 29 CFR 1910.120 (f), persons engaging in on-site activities during which they are or may be exposed to hazardous substances or health hazards at or above the permissible exposure limits or published exposure levels for 30 days or more a year are included in a Medical Surveillance Program.

The timing and location of this project may be such that heat/cold stress could pose a threat to the health and safety of site personnel. Work/rest regimens will be employed as deemed necessary by the Site Safety Officer so site workers do not suffer adverse effects from heat/cold stress. Special clothing and an appropriate diet and fluid intake will be recommended to all on-site personnel to further reduce these temperature-related hazards. Site workers should stop work and notify the Site Safety Officer when they observe symptoms of heat/cold stress in themselves or co-workers.

### 9.1 Heat Stress Monitoring

Heat stress monitoring of personnel wearing protective clothing (i.e., impermeable fabric) should be considered when the ambient temperature is 70 degrees Fahrenheit or above. To monitor the worker, one of the following methods should be employed:

- Heart rate should be measured by the radial pulse for a 30-second period as early as possible in the rest period. If the heart rate exceeds 110 beats per minute, shorten the

next work cycle by one-third (0.3) and keep the rest period the same. If the heart rate still exceeds 110 beats per minute at the next rest period, shorten the following cycle by one-third (0.3).

- Oral temperature should be measured at the end of the work period (before drinking). If oral temperature exceeds 99.6 degrees Fahrenheit, shorten the next work cycle by one-third (0.3) without changing the rest period. If the oral temperature still exceeds 99.6 degrees Fahrenheit at the beginning of the next rest period, shorten the next work cycle by one-third (0.3). Do not permit a worker to wear a semipermeable or impermeable garment when his/her oral temperature exceeds 100.6 degrees Fahrenheit.

## 9.2 Cold Stress Monitoring

Work/rest schedules must be altered to minimize the potential for cold stress. Cold stress is defined as a decrease in core body temperature to 96.8 degrees Fahrenheit and/or cold injury to body extremities. Decreases in core body temperature are associated with reduced mental alertness, reduction in rational decision-making, or loss of consciousness in severe cases. Symptoms of cold stress include pain in extremities (i.e., hands and feet) and severe shivering.

## 10.0 MEDICAL EMERGENCIES

### 10.1 Emergency Medical Care

- First Aid & Rescue Squad (Call 911)
- Lincoln Hospital, 235 East 149<sup>th</sup> Street, Bronx, New York
- Phone: 718-579-5000

### 10.2 Directions to Lincoln Hospital

Driving directions are attached to this HASP.

### 10.3 List of Emergency Phone Numbers

Agency/Facility	Phone Number
All Services	911
Police	911
Fire Emergency	911
Lincoln Hospital	718-579-5000

### 10.4 First Aid Equipment

First aid equipment is available on site at the following locations:

Equipment	Location
First Aid Kit	Field Vehicle
Fire Extinguisher	Field Vehicle

## **11.0 EMERGENCY PROCEDURES**

On-site personnel will use the following standard emergency procedures. The Construction Health and Safety Officer shall be notified of on-site emergencies and be responsible for ensuring that the appropriate procedures are followed.

### **11.1 Personnel Injury in the Work Area**

Upon notification of an injury in the Work Area, the Construction Health and Site Safety Officer will assess the nature of the injury. For a true emergency, 911 shall be called and local emergency services personnel shall initiate the appropriate first aid and contact the designated medical facility, if required.

If the cause of the injury or loss of the injured person does not affect the performance of site personnel, operations may continue with the local emergency services personnel initiating the appropriate first aid and necessary follow-up, as stated above. If the injury increases the risk to others, the designated emergency signal shall be sounded and all site personnel shall move to the site entrance for further instructions. Activities on site will stop until the added risk is removed or minimized. No persons shall reenter the Work Area until the cause of the symptoms or injury is determined by the Construction Health and Safety Officer.

### **11.2 Fire/Explosion**

Upon notification of a fire or explosion on site, the designated emergency signal (three [3] horn blasts) shall be sounded, and all site personnel shall be assembled at the site entrance. The fire department shall be alerted, and all personnel shall be moved to a safe distance from the involved area.

### **11.3 PPE Failure**

If utilization of PPE is necessitated by conditions in the Work Area and a site worker experiences a failure or alteration of protective equipment which affects the protection factor, that person shall immediately leave the Work Area. Reentry shall not be permitted until the equipment has been repaired or replaced.

### **11.4 Other Equipment Failure**

If other equipment on site fails to operate properly, the Construction Health and Safety Officer shall be notified to determine the effect of this failure on continuing operations. If the failure affects the safety of personnel or prevents completion of the planned tasks, all personnel shall leave the Work Area until the situation is evaluated and appropriate actions taken.

In all situations, when an on-site emergency results in evacuation of the Work Area, personnel shall not reenter until:

1. The conditions resulting in the emergency have been corrected;
2. The hazards have been reassessed;
3. The HASP has been revised; and,
4. Site personnel have been briefed regarding changes in the HASP.

## **APPENDIX VIII**

---

## **COMMUNITY AIR MONITORING PLAN (CAMP)**

Real-time air monitoring for volatile organic compounds (VOCs) and particulate levels at the work area will be performed. Continuous monitoring will be performed for all ground intrusive activities and during the handling of contaminated or potentially contaminated media. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pit excavation or trenching, and the installation of soil borings or monitoring wells.

Periodic monitoring for VOCs will be performed during nonintrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street in the midst of a public park or adjacent to a school or residence. Exceedances of action levels observed during performance of the CAMP will be reported to the Office of Environmental Remediation (OER) Project Manager and included in the Daily Report.

### **VOC Monitoring, Response Levels, and Actions**

The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment will be calibrated at least daily.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds five (5) parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below five (5) ppm over background, work activities will resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of five (5) ppm over background, but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate

emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less (but in no case less than 20 feet), is below five (5) ppm over background for the 15-minute average.

- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shut down.

All 15-minute readings must be recorded and be available for OER personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

### **Particulate Monitoring, Response Levels, and Actions**

Particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring will be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter ( $\text{mcg}/\text{m}^3$ ) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed  $150 \text{ mcg}/\text{m}^3$  above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than  $150 \text{ mcg}/\text{m}^3$  above the upwind level, work will be stopped and a reevaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within  $150 \text{ mcg}/\text{m}^3$  of the upwind level and in preventing visible dust migration.

All readings will be recorded and be available for New York State Department of Environmental Conservation (NYSDEC) personnel to review.

Exceedances observed in the CAMP will be reported to NYSDEC Project Managers and included in the Daily Report.

### **Odor, Dust and Nuisance Control Plan**

The Final Engineering Report will include the following certification by the Remedial Engineer: “I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Remedial Action Work Plan.”

#### ***Odor Control Plan***

This odor control plan is capable of controlling emissions of nuisance odors off Site 9 (and on Site if there are residents or tenants on the property). Specific odor control methods to be used on a routine basis will include termination of excavation, dust control via water, and covering of stockpiled soil with plastic sheeting. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. The NYSDEC and the New York State Department of Health (NYSDOH) will be notified of all odor events and of all other complaints about the project. Implementation of all odor controls, including the halt of work, will be the responsibility of the Applicant’s Remediation Engineer, who is responsible for certifying the Final Engineering Report.

All necessary means will be employed to prevent on- and off-Site nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; and, (b) shrouding open excavations with tarps and other covers. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (c) direct load-out of soils to trucks for off-Site disposal; (d) use of chemical odorants in spray or misting systems; and, (e) use of staff to monitor odors in surrounding neighborhoods. Where odor nuisances have developed during remedial work and cannot be corrected or where the release of nuisance odors cannot otherwise be avoided due to on-Site conditions or close proximity to sensitive receptors,

odor control will be achieved by sheltering excavation and handling areas under tented containment structures equipped with appropriate air venting/filtering systems.

### ***Dust Control Plan***

A dust suppression plan that addresses dust management during invasive on-Site work will include, at a minimum, the items listed below:

- Dust suppression will be achieved through the use of a dedicated on-Site water truck for road wetting. The truck will be equipped with a water cannon capable of spraying water directly onto off-road areas including, excavations and stockpiles.
- Clearing and grubbing of larger sites will be done in stages to limit the area of exposed unvegetated soils vulnerable to dust production.
- Gravel will be used on roadways to provide a clean and dust-free road surface.
- On-Site roads will be limited in total area to minimize the area required for water truck sprinkling.

This dust control plan is capable of controlling emissions of dust. If nuisance dust emissions are identified, work will be halted and the source of dusts will be identified and corrected. Work will not resume until all nuisance dust emissions have been abated. OER will be notified of all dust complaint events. Implementation of all dust controls, including halt of work, will be the responsibility of the PE/QEP responsible for certifying the RAR.

### ***Other Nuisances***

A plan for rodent control will be developed and utilized by the contractor prior to and during Site clearing and Site grubbing and during all remedial work.

A plan will be developed and utilized by the contractor for all remedial work and will conform, at a minimum, to NYCDEP noise control standards.

## APPENDIX IX

---

**QUALITY ASSURANCE PROJECT PLAN**  
**for**  
**FORMER G & C SERVICES**  
**255 EAST 138<sup>TH</sup> STREET**  
**BLOCK 2333, LOT 1**  
**BRONX, NEW YORK**  
**NYSDEC BCP Number: C203057**

## **1.0 SITE OBJECTIVE**

Brinkerhoff will perform activities associated with the post-remediation phase at the site, as defined in the Site Management Plan, dated December 2016.

## **2.0 SITE SPECIFIC PROJECT AND DATA QUALITY OBJECTIVES**

The data use objectives for the post-remediation phase of this project include the following:

### **Groundwater**

#### Remedial Action Objectives (RAOs) for Public Health Protection:

- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

#### RAOs for Environmental Protection:

- Restore groundwater aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Remove the source for the groundwater contamination identified at the site.

## **3.0 SAMPLE DESIGN AND RATIONALE**

Groundwater samples will be collected and analyzed in accordance with New York State Department of Environmental Conservation (NYSDEC) DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and the Brownfield Cleanup Program (BCP) Technical Guidance, Section 2. The samples will be analyzed for Target Compound List (TCL) Volatile Organic Compounds as listed in NYCRR Part 375 and by an analytical method included in the NYSDEC Analytical Services Protocol (ASP). The sampling methods, sample preservation requirements, holding times, decontamination procedures, and collection of field blanks, trip blanks, and duplicates will conform to the ASP.

The samples will be analyzed by an accredited laboratory pursuant to the New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP). The samples will be transported under standard chain of custody protocol. The samples will be collected and properly preserved, if necessary, by an Environmental Scientist/Geologist from Brinkerhoff under the oversight of the Qualified Environmental Professional and Professional Engineer.

### **3.1 OFF-SITE AND ON-SITE GROUNDWATER SAMPLING**

When sampling groundwater, a representative groundwater sample will be collected from the down-gradient off-site monitoring well and the on-site monitoring well located in the western Track 4 Area. The well will be installed in accordance with DER-10. Prior to purging, an interface probe, capable of detecting free-phase product thickness of 0.01 feet, will be used to gauge the well.

The well will be sampled in accordance with the USEPA Low Stress/Low Flow Groundwater Sampling Protocol via submersible pumps with dedicated Teflon<sup>®</sup> tubing. Purged water will be placed into DOT-approved 55-gallon drums for future off-site disposal. The low stress/low flow sampling procedure will be used to reduce turbidity of the groundwater samples.

The following will be completed before purging:

1. Note date, time and weather conditions.
2. Identify well identification number.
3. Take PID readings from well immediately after removal of cap.
4. Take depth to groundwater/free product and depth of well.
5. Estimate water volume in well.

The following will be completed after purging:

1. Note start and end time for purging.
2. Note purge method and pumping rate.
3. Note depth from top of casing to groundwater.
4. Take pH, dissolved oxygen, temperature, turbidity, and specific conductance.

The following will be completed after sample collection

1. Note start and end time for sampling.
2. Note sampling method.
3. Take pH, dissolved oxygen, temperature, turbidity, and specific conductance.

A Monitoring Well Data Form will be prepared for the monitoring well sampled and will include all the data collected above.

The sample will be collected directly from the dedicated Teflon<sup>®</sup> tubing via a submersible pump and will be transferred directly into laboratory-supplied glassware. The groundwater sample bottles will be placed in a cooler on ice, transported to Brinkerhoff's office, and placed in a designated refrigerator until picked up by Accredited.

Field blanks, consisting of laboratory-supplied water, will be poured over the decontaminated sampling equipment prior to sampling. Trip blanks consisting of laboratory-supplied vials of water will accompany the samples to the laboratory. These samples will be analyzed for VOCs.

#### **4.0 PRINCIPAL PERSONNEL**

The following personnel are associated with the execution of the Remedial Action phase of the project. The Brinkerhoff personnel referenced below can be contacted at 732-223-2225.

**Principal/Project Coordinator – John Checchio**

Will be responsible for the overall coordination and management of the project.

**Project Engineer – Ira N. Pierce, PE**

Will be responsible for data review, evaluation, oversight, and final sign-off where applicable.

**Project Manager – Sean Harrison**

Will be responsible for day-to-day coordination, scheduling, data review, and evaluation and will be the principal contact for matters relating to the environmental assessment and remediation.

**Quality Assurance Officer – Gary DiMartinis**

Will review sampling procedures and certify that the data was collected and analyzed using the appropriate procedures.

**Geologist – Monica Norton**

Will conduct the various field investigations associated with this project and prepare report data.

**Subcontractors**

**Laboratory**

**Accredited Analytical Resources, LLC (Accredited)**

20 Pershing Avenue

Carteret, New Jersey 07008

NYSDOH Certification No. 11109

Office: 732-969-6112

## 5.0 SAMPLE SUMMARY TABLE

Samples will be collected as a part of the post-remediation phase. Groundwater will be analyzed for respective parameters including, but are not limited to, the following:

Matrix	Analytical Parameters	Number of Samples	Field/Trip Blank Samples	Duplicate Samples
Groundwater	Target Compound List (TCL) Volatile Organic Compounds (EPA Method 8260)	2	1	-

## 6.0 SAMPLING METHODOLOGIES

To ensure environmental sample collection efforts are representative of site conditions, it is customary to utilize accepted Standard Operating Procedures (SOPs) to optimize sampling activities. The Sampling SOPs used for this project include:

- Sampling and Field equipment selection per the referenced standards
- Selection of field equipment calibration and standardization;
- Field equipment preventive maintenance;
- Analytical methodologies and data validation; and
- Document control procedures.

Groundwater samples will be collected using appropriate sampling techniques. SOPs for the collection of groundwater samples will be performed as outlined in the NYSDEC DER-10.

## 7.0 FIELD DOCUMENTATION PROCEDURES

Activities performed in the field are documented in the field logbook. The field logbook is a descriptive notebook detailing site activities and observations so that an accurate and factual account of field procedures may be reconstructed. The entries are signed by the individuals who are making them and document the following specific information:

- Site name and project number;
- Contractor name and address;
- Names of personnel on site;
- Dates and times of all entries;
- Descriptions of all site activities, including site entry and exit times;
- Noteworthy events and discussions;
- Weather conditions;
- Site observations;
- Identification and description of samples and locations;

- Subcontractor information and names of on-site personnel;
- Dates and times of sample collections and chain of custody information;
- Records of photographs; and
- All relevant and appropriate information delineated in field data sheets and sample labels.

## **8.0 SAMPLE HANDLING AND CHAIN-OF-CUSTODY PROCEDURES**

Sample integrity will be tracked via chain-of-custody procedures from collection to data reporting. This involves tracing the possession and handling of samples from the time of collection through analysis and final disposition. The samples are to be considered to be under a person's custody if: (a) it is in a person's physical possession; (b) in view of that person after he/she has taken possession; (c) secured by that person so that no one can tamper with the sample; or (d) secured by that person in an area which is restricted to authorized personnel. A person who has samples under their custody must always comply with these procedures in order to assure sample integrity.

### **8.1 SAMPLE DOCUMENTATION**

Sample documents should be legibly written in ink. Corrections or revisions to sample documentation shall be made by putting a single line through the original entry and initialing any changes. To elaborate on these requirements, the following sub-sections are provided to outline sample documentation procedures which should be employed when conducting the investigation.

### **8.2 FIELD DATA SHEETS AND SAMPLE LABELS**

Field data sheets, along with corresponding sample labels, are routinely used to identify samples and document field sampling conditions and activities. Field data sheets should be completed at the time of sample collection and should always include the following information:

- Site name;
- Contractor name and address;
- Samplers name;
- Sample location and sample identification number;
- Date and time the sample was collected;
- Type of sample collected;
- Brief description of the site;
- Weather conditions;
- Analyses to be performed; and
- Sample container, preservation, and storage information.

Sample labels are always to be securely affixed to the sample container. They must clearly identify the particular sample and delineate the following information:

- Site name and designated project number;
- Sample identification number;

- Date and time the sample was collected;
- Sample preservation method; and
- Analysis requested.

### **8.3 CHAIN OF CUSTODY RECORD**

A chain-of-custody record must be maintained from the time of sample collection until final deposition. Every transfer of custody will be noted and signed for with a copy of the record being kept for each individual whom endorsed it. It is integral that the chain-of-custody record should include the following information:

- Contractor name and address;
- Sample identification number;
- Sample location;
- Sample collection date and time;
- Sample information (e.g. matrix, number of bottles, container type);
- Names and signatures of samplers; and
- Signatures of all individuals who have had custody of the samples.

### **9.0 SAMPLE CONTAINER/PRESERVATION/HOLDING TIMES**

Soil and groundwater samples will be collected in accordance with the standard field sampling practices of the DER-10 and the United States Environmental Protection Agency (USEPA).

The quantitation limits for the project are the applicable remediation standards outlined in Section 9.1 below. In cases where the laboratory practical quantitation limit exceeds the remediation standards, this compound would be further evaluated and identified whether additional investigation is required.

### **9.1 APPLICABLE REMEDIATION STANDARDS**

Groundwater sampling results will be compared to the NYSDEC Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations.

### **10.0 QUALITY OF DATA NEEDED FOR ENVIRONMENTAL DATA MEASURING**

Acceptance/performance criteria were addressed by evaluating the precision, accuracy, representativeness, completeness, and comparability (PARCC) of pertinent QA/QC options specified for sampling and analytical activities. Upon the completion of remedial action activities, a Final Engineering Report will be developed.

## **11.0 QUALITY ASSURANCE (QA)/QUALITY CONTROL (QC)**

To ensure data are of an appropriate quality, the following protocols apply whenever duplicate samples are collected to confirm field screening and/or laboratory analyses with limited analytical deliverables:

- When applicable, rinse and trip blanks will be collected and analyzed with the environmental samples;
- When methods are used to corroborate field sampling or laboratory data with limited analytical deliverables, additional method specific duplicate samples should **not** be analyzed.

### **11.1 DEFINITIVE DATA REQUIREMENTS**

When conducting soil and groundwater sampling, definitive data should be acquired using rigorous analytical protocols, such as conventional USEPA reference methods. This involves securing the acquisition of data which are media-specific to confirm target analyte identities and concentrations. Conventional analytical methods are known to produce tangible raw data (chromatograms, spectra, digital values, etc.) in the form of paper printouts and/or computer generated electronic files. In most instances, definitive data can be generated at the site with a field analytical screening technique or at an off-site fixed laboratory by employing the necessary QA/QC protocols. But regardless of what type of determination is utilized, for data to be definitive, an assessment of analytical or total measurement error must be determined. Therefore, the following criteria should always be implemented when performing an investigation:

- Definitive data QA/QC elements;
- Sample documentation (location, date and time collected, batch, etc.);
- Chain of custody for samples analyzed by an off-site laboratory;
- Sampling design approach (systematic, simple or stratified random, judgmental, etc.);
- Initial and continuing calibration;
- Determination and documentation of instrument and method detection limits;
- Analyte(s) identification;
- Analyte(s) quantification;
- QC blanks (trip, method, rinsate); and
- Matrix spike recoveries.

## **12.0 LABORATORY DATA DELIVERABLE**

The laboratory analytical report should always contain information regarding the analytical methods or procedures employed, sample results, QA/QC results, chain of custody documentation, laboratory correspondence, and all accompanying raw data. It is integral that all data necessary for calculating percent recoveries be presented along with the analytical results. The data deliverable associated with this project is the NYSDEC Category B data deliverable and data transmitted electronically for the development of a Data Usability Summary Report (DUSR).

To facilitate data interpretation efforts, it is advantageous for analytical reports to have all environmental sample data cross-referenced with the appropriate QC audit results (laboratory field blank, equipment rinsate blank, matrix spike, and matrix spike duplicate, etc.). Analytical reports should always cross-reference all laboratory data identification numbers with the corresponding field sample codes noted on the chain-of-custody as well. In addition, all pertinent handling/processing dates (time of collection, laboratory receipt, extraction, and analysis) for each sample applicable to the project must be referenced along with the applicable sample holding time.

Another important aspect to consider when formatting requirements for assembling an analytical report is the units for reporting final laboratory results. In most instances, the appropriate units for the reporting of final laboratory results are often dictated by factors such as the environmental sample media, analytical methodology, program/regulatory requirements, project objectives, and performance criteria. Soil data is presented in milligrams per kilogram (mg/Kg) or parts per million (ppm) while groundwater data is presented in micrograms per liter ( $\mu\text{g/L}$ ) or parts per billion (ppb).

### **13.0 VERIFICATION AND USABILITY PROCEDURES**

To ensure that the measurement data acquired during the collection of sample media in the remedial action are of an appropriate quality, it is important to specify and follow procedures for validating all pertinent environmental monitoring results. Data verification is regarded as a systematic process for reviewing a body of results against a set of established criteria to provide a specified level of assurance concerning validity. It requires a uniform evaluation to be performed on the data to identify those results with questionable quantitative value. The approach for performing data verification should always be independent of the data production effort, and objective in its application. The criteria for validating data will include conducting checks for internal consistency, reviews for transmittal errors, and/or audits for verifying laboratory capability. The assessment of detection limit studies, intra-laboratory comparisons, inter-laboratory comparisons, tests for normality, tests for outliers, and data base entry checks may also be undertaken.

When performing sample collection during the remedial action, it is essential to correlate validated measurement data for reconciliation with the acceptance/performance criteria specified for the project. This will involve rendering a determination to ascertain whether measurement data are of the right type, quality, and quantity required to support environmental decision making efforts. To perform this activity, scientific and statistical procedures must be employed to provide an assessment. The technique for determining if validated measurement results are adequate for their intended use is known as the Data Quality Assessment (DQA) process. The DQA process can provide information to enable a decision maker to draw conclusions about the strength of evidence depicted by a set of collected measurement data. The DQA process is both a scientific and statistical evaluation technique which consists of the following five steps:

- Review project acceptance/performance criteria and sampling design;
- Conduct a preliminary data review;

- Select a statistical test (i.e., Shapiro-Wilk W test, Student's t-Test, etc.);
- Verify the assumptions of the selected statistical test; and
- Draw conclusions from the data.

Even if the formal DQA process is not followed in its entirety, a systematic assessment of measurement data quality should always be performed when conducting a soil remedial investigation. This systematic process will involve carrying out the following data assessments:

- Validate pertinent measurement data for scientific anomalies;
- Correlate pertinent measurement data to the PARCC parameters designated for the project; and
- Identify measurement data trends and outliers.

#### **14.0 LABORATORY QUALITY ASSURANCE/QUALITY CONTROL PROCEDURE**

Accredited is directed under both the USEPA Contract Laboratory Program (CLP) and NYSDOH-EALP for analytical calibration and corrective action requirements. Analytical accuracy determinations are typically undertaken when performing instrumental analyses to assess the proficiency of the measurement process. They are commonly undertaken by incorporating calibration verification, method blank, calibration blank, method control, surrogate spike, and/or matrix spike quality control sample analyses into the analytical scheme. Accuracy measures are often best expressed by calculating the Percent Recovery (%R) between true and found values as follows:

$$\% R = A/B \times 100$$

Where:

A = The found analyte concentration determined experimentally.

B = The true analyte concentration.

Accredited is responsible to provide a QA/QC documentation of any deviations from the accepted methodology and procedures, or performance values outside acceptable ranges are summarized in the Non-Conformance Summary.

#### **15.0 DATA AND RECORDS MANAGEMENT**

It is essential to the success of any remediation project that a data flow or reporting scheme be developed. For any such scheme to be effective, it must address the complete scope of measurement results generated from all facets of an environmental monitoring project including the collection of raw data through the storage of validated results. In addition, it must also completely cover the step-wise procedures for entering data onto various reporting forms, as well as, into computer systems. These procedures should always cover routine data transfer and entry validation checks to ensure these processes are complete.

Records documenting the field activities and laboratory results are electronically stored on Brinkerhoff's server and on a CD in the hardcopy project folder. Records of active projects are maintained in the Qualified Environmental Professional's office. If a project is deemed in active for one-year the hardcopy file is placed in the file storage room until the Qualified Environmental Professional deem the file should be archived in which case the entire file will be electronically stored.

# SITE WIDE INSPECTION CHECKLIST

Site Name: 255 East 138<sup>th</sup> Street Location: 255 East 138<sup>th</sup> Street, Bronx, NY Project No: 10BR188

Inspector Name: \_\_\_\_\_ Date: \_\_\_\_\_ Weather Conditions: \_\_\_\_\_

Reason for Inspection (i.e. routine, severe condition, etc.): Routine – Year Certification Period

Check one of the following: **Y:** Yes **N:** No **NA:** Not Applicable

		Y	N	NA	Normal Situation	Remarks
	<b>General</b>					
1	What are the current site conditions?				-	
2	Are all applicable site records (e.g. documentation of construction activity, SSD, or HVAC system maintenance and repair, etc.) complete and up to date?				Y	
	<b>Easement</b>					
3	Has site use (restricted residential and lesser uses such as commercial and industrial) remained the same?				Y	
4	Does it appear that all environmental easement restrictions have been followed?				Y	
	<b>Track 4 Composite Cover System</b>					
5	Are there indications of a breach in the track 4 composite cover system at the time of this inspection?				N	
6	Are there any cracks in the building foundation slab?				N	
7	Are there any cracks in the building foundation sidewalls?				N	
8	Is there any construction activity, or indication of any construction activity within the past certification period (including tenant improvements), that included breaching the composite cover system, on-site at the time of this inspection?				N	
9	If yes to item #8, is there documentation that the SMP, HASP, and CAMP for the site were/are being followed?				NA if N to 8 Y if Y to 8	
	<b>Track 2 and Track 4 Vapor Barrier System</b>					
10	Are there indications of a breach in the vapor barrier system at the time of this inspection?				N	
11	Is there any construction activity, or indication of any construction activity within the past certification period (including tenant improvements), that included breaching the site-wide vapor barrier system at the time of this inspection?				N	
12	If yes to item #11, is there documentation that the SMP, HASP, and CAMP for the site were/are being followed?				NA if N to 11 Y if Y to 11	

\*\*\*If the answer(s) to any of the above questions indicate non-compliance with any ECs/ICs for the site, additional remarks must be provided and, where applicable, documentation attached to this checklist detailing additional inspection and repair activities.

Additional Remarks: \_\_\_\_\_

## **APPENDIX XI**

---

## **FIELD SAMPLING PLAN**

### **Sampling Protocol**

The groundwater samples will be collected and analyzed in accordance with DER-10 and the BCP *Technical Guidance*, Section 2. The samples will be analyzed for TCL VOCs as listed in NYCRR Part 375 and by an analytical method included in the NYSDEC Analytical Services Protocol (ASP). The sampling methods, sample preservation requirements, holding times, decontamination procedures, and collection of field blanks, trip blanks, and duplicates will conform to the ASP.

The samples will be analyzed by an accredited laboratory pursuant to the New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP). The samples will be transported under standard chain of custody protocol. The samples will be collected and properly preserved, if necessary, by an Environmental Scientist/Geologist from Brinkerhoff under the oversight of the Professional Engineer. If soil borings need to be installed, Geoprobe® direct-push drill technology and macrocores with designated disposable acetate liners will be used. The samples will be collected from the acetate liners following field screening.

The samples collected will be put into laboratory-supplied glassware and will be assigned a specific sample number to be included on the chain of custody. One trip blank sample will be collected per sampling event for analysis of TCL VOCs. Analytical results will be reported with matrix spikes and will be provided in electronic and paper format. Sampling methods, sample preservation requirements, sample holding times, decontamination procedure for field equipment and frequency for field blanks, field duplicates and trip blanks for aqueous samples will conform to the ASP.

Once the samples are collected and placed in laboratory-supplied glassware, the samples will be placed in a cooler on ice, transported to Brinkerhoff's office, and placed in a designated refrigerator until picked up by Accredited, an NYSDOH ELAP-certified laboratory, which is the laboratory chosen for this project.

### **Sampling Groundwater**

When sampling groundwater, approximately two weeks after well installation, representative groundwater samples will be collected from each monitoring well in accordance with DER-10. Prior to purging, an interface probe, capable of detecting free-phase product thickness of 0.01 feet, will be used to gauge each well.

The wells will be sampled in accordance with the USEPA Low Stress/Low Flow Groundwater Sampling Protocol via submersible pumps with dedicated Teflon® tubing.

Purged water will be placed in DOT-approved 55-gallon drums for future off-site disposal. The low stress/low flow sampling procedure will be used to reduce turbidity of the groundwater samples.

The following will be completed before purging:

1. Note date, time and weather conditions.
2. Identify well identification number.
3. Take PID readings from well immediately after removal of cap.
4. Take depth to groundwater/free product and depth of well.
5. Estimate water volume in well.

The following will be completed after purging:

1. Note start and end time for purging.
2. Note purge method and pumping rate.
3. Note depth from top of casing to groundwater.
4. Take pH, dissolved oxygen, temperature, turbidity, and specific conductance.

The following will be completed after sample collection

1. Note start and end time for sampling.
2. Note sampling method.
3. Take pH, dissolved oxygen, temperature, turbidity, and specific conductance.

Monitoring Well Data Forms will be prepared for each monitoring well sampled and will include all the data collected above.

Samples will be collected using dedicated Teflon® tubing via a submersible pump and will be transferred directly into laboratory-supplied glassware. The samples will be placed in a cooler on ice, transported to Brinkerhoff's office, and placed in a designated refrigerator until picked up by Accredited.

Field blanks, consisting of laboratory-supplied water, will be poured over the decontaminated sampling equipment prior to sampling. Trip blanks consisting of laboratory-supplied vials of water will accompany the samples to the laboratory. These samples will be analyzed for VOCs.

### **Decontamination Procedures for Drilling Equipment**

If monitoring wells need to be installed at the site, the hollow stem augers will be properly decontaminated using a high-pressure wash between well installations. Wash water, purge water, and drill cuttings will be placed in DOT-approved 55-gallon drums for proper off-site disposal.

If soil borings need to be advanced at the site, Geoprobe® direct-push drill technology and macrocores with designated disposable acetate liners will be used; therefore, no decontamination is required. Dedicated acetate liners will be discarded into DOT-approved 55-gallon drums for off-site disposal.
